Maddah, 2023-06-09 This edited volume presents state of the art research that can leverage large scale sensory data collected in grocery retail stores where a single customer visit may generate nearly 10 000 data points For decades retail shelf space optimization has been confined to the analysis of product allocation decisions over a limited number of shelves often taken in isolation Such models incorporated interesting concepts relating to space and cross space elasticity in the design of planograms Although useful these models have not addressed the bigger picture of planning store shelf space in a more holistic manner It is important to note that the space planning analytics in the book are particularly important in an era where e commerce is on the rise and brick and mortar retailing is declining and experiencing severe crises the retail apocalypse This is the first research oriented book that examines novel problems in store space analytics triggered by modern day sensory technologies customer trackers and transactional tools point of sales etc In fact such transformative technologies have prompted the development of new and exciting business practices accompanied by the need for powerful data driven models and analyses in retail shelf space and layout planning The book will facilitate developing algorithms and decision tools that allow a better leverage of the data collected from these mediums RETAIL & SERVICES MARKETING
