## **The Beginnings Of Forever:**

Ever the Beginning Allen T. Brown, Jeeyoon Kim, 2025-07-29 I often shake my head at what has happened to me to allow me to live the life I am living now Allen T Brown's stunning collection of powerful and poignant black and white film photography pairs with reflections on a unique life This reverent down to earth memoir will inspire readers take time to be in awe of nature and of the life they've been given to never back down from a challenge and to grab every opportunity to learn something new no matter their age From Ever the Beginning I have achieved much wisdom knowledge friendship and wealth things I could never have imagined in my youth And while you may not know me my stories are a gift for you from someone who has lived long enough to be able to look back with a broad perspective I hope my stories are like sitting down together with me in a caf sharing the key insightful moments of my life over a morning coffee My only wish is that you will start to dream about the impossible being possible and that this book helps you to gain the strength and faith to take the first step into the unknown the potential discovery of yourself If the farm boy in the middle of nowhere could dream and make the dream into a reality you can certainly do it too Allen T Brown was born in 1934 and is the author of *Dancing Through Life* Jeeyoon Kim is a classical pianist educator author and podcaster and is the author of *Whenever You're Ready* and *Millions of Dreams*

The TSQL2 Temporal Query Language Richard T. Snodgrass, 2012-12-06 Temporal databases have been an active research topic for at least fifteen years During this time several dozen temporal query languages have been proposed Many within the temporal database research community perceived that the time had come to consolidate approaches to temporal data models and calculus based query languages to achieve a consensus query language and associated data model upon which future research can be based While there were many query language proposals with a diversity of language and modeling constructs common themes kept resurfacing However the community was quite fragmented with each research project being based on a particular and different set of assumptions and approaches Often these assumptions were not germane to the research per se but were made simply because the research required a data model or query language with certain characteristics with the particular one chosen rather arbitrarily It would be better in such circumstances for research projects to choose the same language Unfortunately no existing language had attracted a following large enough to become the one of choice In April 1992 Richard Snodgrass circulated a white paper that proposed that a temporal extension to SQL be produced by the research community Shortly thereafter the temporal database community organized the ARPA NSF International Workshop on an Infrastructure for Temporal Databases which was held in Arlington TX in June 1993
