the world following these developments is undertaken with this guiding principle that although further scientific thought may take us far beyond our present conception of the world we may never again return to the previous narrow and restricted scheme Although a degree of mathematical sophistication is presupposed Dr Weyl develops all the tensor calculus necessary to his exposition He then proceeds to an analysis of the concept of Euclidean space and the spatial conceptions of Riemann From this the nature of the amalgamation of space and time is derived This leads to an exposition and examination of Einstein s general theory of relativity and the concomitant theory of gravitation A detailed investigation follows devoted to gravitational waves a rigorous solution of the problem of one body laws of conservation and the energy of gravitation Dr Weyl s introduction of the concept of tensor density as a magnitude of quantity contrasted with tensors which are considered to be magnitudes of intensity is a major step toward a clearer understanding of the relationships among space time and matter
