Stroke Theory Of Writing:

The Stroke. Theory of Writing Gerrit Noordzij, 2019 The stroke is the most concise and powerful statement of Gerrit Noordzij's theory of writing and was first published in Dutch in 1985. The book puts forward a genuine theory of all writing done with any kind of generating tool. Noordzij starts with fundamentals: the space within and between letters and proceeds in stages towards a full account of how the strokes of writing can be formed and an analysis of the qualities of letters. Along the way there are reflections on history and culture and remarks on method. Noordzij's theory serves to repair the split that grew up with the invention of printing between written and typographic letters. He shows us the underlying written quality of all letters with whatever technology they have been formed. Just by virtue of its strong theory, *The Stroke* has practical consequences that transcend any simple how-to approach. Gerrit Noordzij is one of the eminent Dutch graphic designers and in all senses a writer. He has also been a path-breaking teacher at the Royal Academy of Art in The Hague where from 1970 to 1990 he directed the course in letter design. Among the students from his classes are some of the most distinguished Dutch type and graphic designers. As a writer of essays and books, his works include the bulletin *Letterletter* reissued in book form in 2000 and *De handen van de zeven zusters* 2000. *The Stroke of the Pen* Gerrit Noordzij, 1982

Designing Type Karen Cheng, 2020-10-20 The now classic introduction to designing typography handsomely redesigned and updated for the digital age. In this invaluable book, Karen Cheng explains the processes behind creating and designing type, one of the most important tools of graphic design. She addresses issues of structure, optical compensation, and legibility with special emphasis given to the often overlooked relationships between letters and shapes in font design. In this second edition, students and professional graphic designers alike will benefit from an expanded discussion of the creative practice of designing type: what designers need to consider, their rationale, and issues of accessibility in the context of contemporary processes for the digital age. Illustrated with more than 400 diagrams that demonstrate visual principles and letter construction ranging from informal progress sketches to final type designs and diagrams, this essential guide analyzes a wide range of classic and modern typefaces, including those from many premier type foundries. Cheng's text covers the history of type, the primary systems of typeface classification, the parts of a letter, and the effects of new technology on design methodology among many other key topics. *Philosophy of Logic*, 2006-11-29 The papers presented in this volume examine topics of central interest in contemporary philosophy of logic.
