Stroke Units Evidence Based Approaches:

Stroke Units Peter Langhorne, Martin Dennis, 2008-04-15 Based on a major systematic review from international centres this concise text discusses the benefits of managing stroke patients in specialised units compared to management outside the hospital. It provides invaluable information in the most effective management for this chronically disabled sector. Geriatric Medicine: an evidence-based approach Frank Lally, Christine Roffe, 2014-10-02 People are living longer and the population over the age of 60 is burgeoning with repercussions for health services and healthcare expenditure in developed countries. Crucially disease aetiology, diagnosis and treatment in older people differ from the general adult population. Older people often have complicated co-morbidities and respond to treatment in different ways compared to younger people. Evidence of efficacy of different treatments is often lacking because older people are under-represented in clinical trials and the specific needs of older people are rarely discussed specifically in more general texts. Geriatric medicine: an evidence based approach is a clinical reference for health care professionals who manage older patients and summarizes up-to-date research literature in a style that can be directly applied by busy healthcare professionals and provide a useful resource for reference.

Managing Strokes and TIAs in Practice R.S. MacWalter, Colin P Shirley, 2003 This is a practical guide for the busy clinician. Describing epidemiology and the pathophysiology of stroke, this authoritative guide details stroke risk factors, primary and secondary prevention strategies and provides advice on how to manage a patient in the acute phase.

Scottish Medical Journal, 1999 South African Medical Journal, 1999 Evidence-based Clinical Practice John P. Geyman, Richard A. Deyo, Scott D. Ramsey, 2000 Lays the groundwork for understanding the evidence-based approach and explains how to apply evidence-based medicine skills to every day practice. Teaches how to critically read medical literature, develop new skills of self-learning, better evaluate clinical guidelines and understand techniques and limitations of cost and outcome assessment. Discusses computer aids to clinical practice and assessment of accuracy of screening and diagnostic tests and provides many patient vignettes to illustrate concepts. Geyman is professor emeritus of family medicine at the University of Washington School of Medicine. Annotation copyrighted by Book News Inc.
