*Stroke Rehabilitation* LeeAnne M. Carey, 2012-12-01 Stroke Rehabilitation Insights from Neuroscience and Imaging informs and challenges neurologists rehabilitation therapists imagers and stroke specialists to adopt more restorative and scientific approaches to stroke rehabilitation based on new evidence from neuroscience and neuroimaging literatures The fields of cognitive neuroscience and neuroimaging are advancing rapidly and providing new insights into human behavior and learning Similarly improved knowledge of how the brain processes information after injury and recovers over time is providing new perspectives on what can be achieved through rehabilitation Stroke Rehabilitation explores the potential to shape and maximize neural plastic changes in the brain after stroke from a multimodal perspective Active skill based

learning is identified as a central element of a restorative approach to rehabilitation. The evidence behind core learning principles as well as specific learning strategies that have been applied to retrain lost functions of movement, sensation, cognition, and language are also discussed. Current interventions are evaluated relative to this knowledge base, and examples are given of how active learning principles have been successfully applied in specific interventions. The benefits and evidence behind enriched environments is reviewed with examples of potential application in stroke rehabilitation. The capacity of adjunctive therapies such as transcranial magnetic stimulation to modulate receptivity of the damaged brain to benefit from behavioral interventions is also discussed in the context of this multimodal approach. Focusing on new insights from neuroscience and imaging, the book explores the potential to tailor interventions to the individual based on viable brain networks. This book is intended for clinicians, rehabilitation specialists, and neurologists who are interested in using these new discoveries to achieve more optimal outcomes. Equally as important, it is intended for neuroscientists, clinical researchers, and imaging specialists to help frame important clinical questions and to better understand the context in which their discoveries may be used.

**Stroke Rehabilitation** Robert Fawcus, 2008-04-15. There is a continuing need for education about stroke and its management both in acute and chronic stages. This book aims to facilitate interdisciplinary cooperation, which is essential if rehabilitation programmes are to be optimally effective. Any collaborative enterprise is heavily dependent upon the relationship that develops between the participants. Here, a group of health care professionals give their own perspective on the daily problems they encounter and the specific skills involved in dealing with these problems. Written in an informative and accessible style, this book will help professionals involved in the management of stroke to understand the role of other members of the rehabilitation team and hence provide coordinated care for the patient. Robert Fawcus is a Consultant Speech and Language Therapist at the Nuffield Hospital, Tunbridge Wells, and was formerly Professor of Clinical Communication Studies at City University, London.
