## **Structural Foundation Designers Manual:**

**Structural Foundation Designers' Manual** W. G. Curtin, Gerry Shaw, Gary Parkinson, J. Golding, Norman Seward, 2006-12-04 This manual for civil and structural engineers aims to simplify as much as possible a complex subject which is often treated too theoretically by explaining in a practical way how to provide uncomplicated buildable and economical foundations. It explains simply clearly and with numerous worked examples how economic foundation design is achieved. It deals with both straightforward and difficult sites following the process through site investigation, foundation selection and finally design. The book includes chapters on many aspects of foundation engineering that most other books avoid including filled and contaminated sites, mining and other man-made conditions. It features a step by step procedure for the design of lightweight and flexible rafts to fill the gap in guidance in this much neglected yet extremely economical foundation solution. It concentrates on foundations for building structures rather than the larger civil engineering foundations. It includes many innovative and economic solutions developed and used by the authors' practice but not often covered in other publications. It provides an extensive series of appendices as a valuable reference source. For the Second Edition the chapter on contaminated and derelict sites has been updated to take account of the latest guidelines on the subject including BS 10175. Elsewhere throughout the book references have been updated to take account of the latest technical publications and relevant British Standards.

*Structural Foundation Designers Manual* William George Curtin, 1994 This book is based on over 30 years intensive practical experience. As a designers' manual its aim is to simplify as much as possible a complex subject which is often treated too theoretically by providing simple buildable and economical foundations. It explains simply clearly and with numerous worked examples how economic foundation design is achieved. It deals with both straightforward and difficult sites following the process through site investigation, foundation selection and finally design. The book includes chapters on many of the aspects of foundation engineering that most other books avoid including filled and contaminated sites, mining and other man-made conditions that are all too frequently encountered. A step by step procedure for the design of lightweight and flexible rafts is provided to fill the gap in guidance on this much neglected yet extremely economical foundation solution. The book concentrates on foundations for building structures rather than the larger civil engineering foundations and includes many innovative and economic solutions developed and used by the authors' practice but not often covered in other publications. An extensive series of appendices completes the book providing a valuable source of reference. Written by practising engineers for practising engineers it draws on Curtin's wide experience in the field and will be a worthy companion to their Structural Masonry Designers' Manual also published by Blackwell Scientific Publications.

*Model Uncertainties in Foundation Design* Chong Tang, Kok-Kwang Phoon, 2021-03-16 Model Uncertainties in Foundation Design is unique in the compilation of the largest and the most diverse load test databases to date covering many foundation types: shallow foundations, spudcans, driven piles.

drilled shafts rock sockets and helical piles and a wide range of ground conditions soil to soft rock All databases with names prefixed by NUS are available upon request This book presents a comprehensive evaluation of the model factor mean bias and coefficient of variation COV for ultimate and serviceability limit state based on these databases These statistics can be used directly for AASHTO LRFD calibration Besides load test databases performance databases for other geo structures and their model factor statistics are provided Based on this extensive literature survey a practical three tier scheme for classifying the model uncertainty of geo structures according to the model factor mean and COV is proposed This empirically grounded scheme can underpin the calibration of resistance factors as a function of the degree of understanding a concept already adopted in the Canadian Highway Bridge Design Code and being considered for the new draft for Eurocode 7 Part 1 EN 1997 1 202x The helical pile research in Chapter 7 was recognised by the 2020 ASCE Norman Medal
