Structure and Dynamics of Biopolymers C Nicolini, 1987-06-30

**Structure and Dynamics of Biopolymers** C.

Nicolini, 2012-12-06 This NATO ASI on BIOPOLYMERS STRUCTURE AND DYNAMICS held between 22nd June 4th July 1986 at Erice Italy has brought together scientists from a broad variety of biophysical disciplines polymer physics biophysics and physical chemistry structure and dynamics of polynucleotides proteins and polysaccharides to present the current state of knowledge in their fields both experimental and theoretical This Advanced Study Institute was indeed a successful attempt to enhance the possibility of intersection of a number of research lines that currently are progressing well but are still running largely in parallel with one another protein folding single polymer phase transitions DNA condensation into liquid crystalline like arrays packaging in viruses and polysaccharide gel formation Although each phenomenon is distinctive an awareness of similarities may lead to new ideas The program has emphasized condensed forms of biopolymers We are universally confronted in biology by chain polymers folded on themselves or interlinked in gel like assemblies whether we look at the native structure of proteins the role of polysaccharides in connective tissue or the genetic apparatus A number of lectures have been devoted to condensed forms of DNA closed circular supercoils toruses chromatin

*A Computational Study of the Conformational Structure and Dynamics of Biopolymers in Relation to Single Molecule Fluorescence Resonance Energy Transfer Measurements* Jianyuan Shang, 2006 New Directions in Guided Wave and Coherent Optics D.B.

Ostrowsky, E. Spitz, 1971-01-31 As optical fiber communication systems have moved out of the laboratory and into commercial use over the past several years the general field of guided wave and coherent optics has undergone a radical transformation Research in optical communication has turned heavily towards single mode technology and totally new phenomena and applications of the existing technology outside the communication field have begun to proliferate It was for this reason that we decided to organize a NATO Advanced Study Institute assembling the leading workers in this new domain in order to define the state of the art and develop an idea of the new directions the field might take The lectures and seminars presented at this Advanced Study Institute form the basis for this book The subjects treated can be roughly grouped as New phenomena in optical fibers such as non linear effects soliton propagation and polarization conservation New applications of fibers to measurements of rotation pressure temperature etc and medical uses Advanced and exploratory work on single mode fiber communication systems including the use of coherent transmission schemes and optical amplification Recent developments of optical information treatment based on four wave mixing Integrated optical devices and technologies including bistable devices parametric oscillators and optical logic In addition to these major topics a number of national reviews and specialized seminars treating new guided wave structures and materials are included The co editors admit being rather pleased with the result Biopolymer Membranes and Films Mariana Agostini De Moraes, Classius Ferreira Da Silva, Rodrigo Silveria

Vieira, 2020-06-19 Biopolymer Membranes and Films Health Food Environment and Energy Applications presents the latest

techniques for the design and preparation of biopolymer based membranes and films leading to a range of cutting edge applications The first part of the book introduces the fundamentals of biopolymers two dimensional systems and the characterization of biopolymer membranes and films considering physicochemical mechanical and barrier properties Subsequent sections are organized by application area with each chapter explaining how biopolymer based membranes or films can be developed for specific innovative uses across the health food environmental and energy sectors This book is a valuable resource for researchers scientists and advanced students involved in biopolymer science polymer membranes and films polymer chemistry and materials science as well as for those in industry and academia who are looking to develop materials for advanced applications in the health food science environment or energy industries Presents detailed coverage of a range of novel applications in key strategic areas across health food environment and energy Considers the difficulties associated with two dimensional materials Assists the reader in selecting the best materials and properties for specific applications Helps researchers scientists and engineers combine the enhanced properties of membranes and films with the sustainable characteristics of biopolymer based materials

*Polymer and Biopolymer Nanocomposites* Muhammad Moniruzzaman,A. Vijaya Bhaskar Reddy,2025-12-19 Polymer and Biopolymer Nanocomposites Recent Advances and Applications delves into the fundamental principles of polymer and biopolymer nanocomposites while examining the latest technological advancements in their fabrication and characterization The book brings together contributions from leading scientists and researchers worldwide offering a comprehensive review of cutting edge developments and techniques in this field By covering a wide spectrum of current applications the book aims to showcase the potential for future technological progress and commercialization It emphasizes the diverse range of applications for polymer and biopolymer nanocomposites demonstrating their significance in various industries Finally the book discusses innovative fabrication methods advanced characterization techniques and potential commercial uses The insights provided aim to pave the way for new technological breakthroughs and enhanced industrial applications Covers fundamentals and properties of polymer and biopolymer nanocomposites Addresses the latest technological developments in fabrication and characterization Discusses LCA and the environmental impact of polymer and biopolymer nanocomposites Includes coverage of industries such as biomedical drilling fluids cosmetics and personal care energy storage gas sensing and solar energy conversion biodegradable electronics water purification aerospace and automotive applications

**Structure and Dynamics of Confined Polymers** John J. Kasianowicz,M. Kellermayer,David W. Deamer,2012-12-06 Polymers are essential to biology because they can have enough stable degrees of freedom to store the molecular code of heredity and to express the sequences needed to manufacture new molecules Through these they perform or control virtually every function in life Although some biopolymers are created and spend their entire career in the relatively large free space inside cells or organelles many biopolymers must migrate through a narrow passageway to get to their targeted destination This suggests the questions How does confining a polymer affect its

behavior and function What does that tell us about the interactions between the monomers that comprise the polymer and the molecules that confine it Can we design and build devices that mimic the functions of these nanoscale systems The NATO Advanced Research Workshop brought together for four days in Bikal Hungary over forty experts in experimental and theoretical biophysics molecular biology biophysical chemistry and biochemistry interested in these questions Their papers collected in this book provide insight on biological processes involving confinement and form a basis for new biotechnological applications using polymers In his paper Edmund DiMarzio asks What is so special about polymers Why are polymers so prevalent in living things The chemist says the reason is that a protein made of N amino acids can have any of 20 different kinds at each position along the chain resulting in  $20^N$  different polymers and that the complexity of life lies in this variety

Modern Methods for Theoretical Physical Chemistry of Biopolymers Evgeni Starikov, James P. Lewis, Shigenori Tanaka, 2011-08-11 Modern Methods for Theoretical Physical Chemistry of Biopolymers provides an interesting selection of contributions from an international team of researchers in theoretical chemistry This book is extremely useful for tackling the complicated scientific problems connected with biopolymers physics and chemistry The applications of both the classical molecular mechanical and molecular dynamical methods and the quantum chemical methods needed for bridging the gap to structural and dynamical properties dependent on electron dynamics are explained Also included are ways to deal with complex problems when all three approaches need to be considered at the same time The book gives a rich spectrum of applications from theoretical considerations of how ATP is produced and used as energy currency in the living cell to the effects of subtle solvent influence on properties of biopolymers and how structural changes in DNA during single molecule manipulation may be interpreted Presents modern successes and trends in theoretical physical chemistry chemical physics of biopolymers Topics covered are of relevant importance to rapidly developing areas in science such as nanotechnology and molecular medicine Quality selection of contributions from renowned scientists in the field Computational Approaches to the Structure and Dynamics of Biomolecules Steven P. Mielke, 2006 Principles of Nucleic Acid Structure Stephen Neidle, Mark Sanderson, 2021-10-15 Principles of Nucleic Acid Structure Second Edition provides the most complete and concise summary of underlying principles and approaches to studying nucleic acid structure including discussions of X ray crystallography NMR molecular modelling and databases The book's focus is on a survey of structures that are especially important for biomedical research and pharmacological applications This updated edition includes the latest advances relevant to recognition of DNA and RNA by small molecules and proteins including sections on RNA folding ribosome structure and antibiotic interactions DNA quadruplexes DNA and RNA protein complexes and short interfering RNA siRNA This reference is a must have for those seeking an authoritative comprehensive and up to date source on all aspects of nucleic acid structure from basic first principles to details of recent research results Completely updated with an expanded section on protein nucleic acid interactions that reflects major increases in our knowledge Defines technical terms for

1985      (Japan),1900      DNA Replication Herve Seligmann,2011-08-01 The study of DNA advanced human knowledge in a way comparable to the major theories in physics surpassed only by discoveries such as fire or the number zero However it also created conceptual shortcuts beliefs and misunderstandings that obscure the natural phenomena hindering its better understanding The deep conviction that no human knowledge is perfect but only perfectible should function as a fair safeguard against scientific dogmatism and enable open discussion With this aim this book will offer to its readers 30 chapters on current trends in the field of DNA replication As several contributions in this book show the study of DNA will continue for a while to be a leading front of scientific activities      Structure and Dynamics of Hydrated Biopolymers Poornima Ramamohan,2023      **Structural and Dynamic Properties of Lipids and Membranes** Peter J. Quinn,Richard J. Cherry,1992 This work contains an in depth account of the application of a range of biophysical methods to characterize the structure of lipids and membranes Topics covered include non bilayer lipid phases infrared studies of membrane proteins and biomembrane technologies      *Cumulated Index Medicus* ,1987      **Progress in Biopolymer Research** Pablo C. Sánchez,2007 This book presents new and important research on biopolymers which are a special class of polymers produced by living organisms Starch proteins and peptides DNA and RNA are all examples of biopolymers in which the monomer units respectively are sugars amino acids and nucleic acids A major but defining difference between polymers and biopolymers can be found in their structures Polymers including biopolymers are made of repetitive units called monomers Biopolymers inherently have a well defined structure The exact chemical composition and the sequence in which these units are arranged is called the primary structure Many biopolymers spontaneously fold into characteristic compact shapes see also protein folding as well as secondary structure and tertiary structure which determine their biological functions and depend in a complicated way on their primary structures Structural biology is the study of the structural properties of the biopolymers In contrast most synthetic polymers have much simpler and more random or statistic structures      **The Cumulative Book Index** ,1989 A world list of books in the English language      **Biomolecular Stereodynamics** Ramaswamy H.
