Eggleton, International Astronomical Union, 1976 Structure and Evolution of Close Binary Systems. International Astronomical Union No. 73. Cambridge. 28 July - 1 August, 1975 Peter Eggleton, Simon Mitton, John Whelan, 1976 *Dynamics of Close Binary Systems* Zdenek Kopal, 2012-12-06 The aim of the present book will be to provide a comprehensive account of our present knowledge of the theory of dynamical phenomena exhibited by close binary systems and on the basis of such phenomena as have been attested by available observations to outline probable evolutionary trends of such systems in the course of time The evolution of the stars motivated by nuclear as well as gravitational energy sources constitutes nowadays a well established branch of stellar astronomy No theories of such an evolution are as yet sufficiently specific let alone infallible not to require continual tests by a confrontation of their consequences with the observed properties of actual stars at different stages of their evolution The discriminating power of such tests depends of course on the range of information offered by the test objects Single stars which move alone in space are now known to represent only a minority of objects constituting our Galaxy cf Chapter 1 2 and are moreover not very revealing of their basic physical characteristics such as their masses or absolute dimensions If there were no binary systems in the sky the only star whose vital statistics would be fully known to us would be our Sun

Zech, 2013-03-14 Astronomy and Astrophysics Abstracts which has appeared in semi annual volumes since 1969 is devoted to the recording summarizing and indexing of astronomical publications throughout the world It is prepared under the auspices of the International Astronomical Union according to a resolution adopted at the 14th General Assembly in 1970 Astronomy and Astrophysics Abstracts aims to present a comprehensive documentation of literature in all fields of astronomy and astrophysics Every effort will be made to ensure that the average time interval between the date of receipt of the original literature and publication of the abstracts will not exceed eight months This time interval is near to that achieved by monthly abstracting journals compared to which our system of accumulating abstracts for about six months offers the advantage of greater convenience for the user Volume II contains literature published in 1974 and received before August IS 1974 some older literature which was received late and which is not recorded in earlier volumes is also included Beginning with this volume some minor changes of our classification scheme have been made We acknowledge with thanks contributions to this volume by Dr J Bouška who

surveyed journals and publications in the Czech language and supplied us with abstracts in English and by the Commonwealth Scientific and Industrial Research Organization CSIRO Sydney for providing titles and abstracts of papers on radio astronomy *Energy Research Abstracts*, 1981 **A Guide to Close Binary Systems** Edwin Budding, Osman Demircan, 2022-05-12 Introduction to Close Binary Systems provides a comprehensive survey and guide to the fast moving field of multiple specifically binary stars with an up to date account of research around close i.e. interacting pairs. Such interactions allow direct quantification of stellar properties opening up factual insights into basic building blocks of the Universe. The book provides a much needed update for the seminal Close Binary Systems of Zdeněk Kopal. Following a comparable plan it presents relevant subject matter with an emphasis on building a framework of understanding to serve as a supporting resource for students and researchers. The text starts from a general historical background and progresses into the main theoretical ideas supporting our prima facie interpretation of observations. The central chapters explore further into these observational methods arranged according to the classic subdivisions of astrometry, spectroscopy and photometry. Optimal inversion of observational data into model parametrization is a theme through these chapters. Significant here is the problem of how non-uniqueness in modelling affects interpretation. The underlying issues of stellar evolution bearing on observational evidence become paramount in the last four chapters. The book proceeds step by step from directly understandable examples of unevolved pairs to the challenging cases where stars are found in more and more extreme conditions leading up to the mergers of massive black hole pairs seen in the new field of gravitational wave astronomy. This is a valuable reference for postgraduate and advanced undergraduate students working in mainstream areas of stellar astrophysics with applications also to exoplanet research which shares some methodological features. Course designers for stellar astrophysics will find a useful selection of topics within this book. Key features: Provides a well explained and backgrounded up to date account of close binary systems in a fast moving field of research that is growing in scientific importance. Surveys a wide range of case studies within the context of binary and multiple star systems. Fills an acknowledged gap in current literature. Cover Image: A public memorial to Zdeněk Kopal in his home town birthplace of Litomyšl in Czechia. *Physics Briefs*, 1993 *Literature* 1989, Part 1. Astronomisches Rechen-Institut, 2013-11-11 From the reviews: *Astronomy and Astrophysics Abstracts* has appeared in semi-annual volumes since 1969 and it has already become one of the fundamental publications in the fields of astronomy, astrophysics and neighbouring sciences. It is the most important English language abstracting journal in the mentioned branches. The abstracts are classified under more than a hundred subject categories thus permitting a quick survey of the whole extended material. The AAA is a valuable and important publication for all students and scientists working in the fields of astronomy and related sciences. As such it represents a necessary ingredient of any astronomical library all over the world. *Space Science Review* Dividing the whole field plus related subjects into 108 categories each work is numbered and most are accompanied by brief abstracts. Fairly

comprehensive cross referencing links relevant papers to more than one category and exhaustive author and subject indices are to be found at the back making the catalogues easy to use The series appears to be so complete in its coverage and always less than a year out of date that I shall certainly have to make a little more space on those shelves for future volumes
