The fifth edition of *The Structure of American Industry* contains 12 industry case studies, a chapter on conglomerates, and a concluding chapter on public policy toward competition. Appearing for the first time in this edition are chapters on the computer industry, banking, and major league team sports. These three chapters replaced those in the fourth edition on cigarettes, metal containers, and the aerospace industry. The fourth edition's chapter on the communications industry was narrowed to focus on telephone service, and the chapter on conglomerates, a "non-industry," was added. The reports on agriculture, petroleum, and automobiles were each written by new authors for the fifth edition.

Adams' highly successful case study book continues to play an important role in helping students to understand industrial organization. From the brief glimpses of 12 industries students learn to appreciate that the source of ideas for theoretical modeling and empirical testing comes from observation of the world, and only through the laborious undertaking of careful study of the institutional environment surrounding our industrial sector can we hope to improve the realism and subsequent usefulness of the insights that are derived from economic modeling. Although advanced scholars of industrial organization will not likely find much new in

Building American Submarines, 1914-1940 Gary E. Weir,2000-04 In this volume Gary E Weir assesses the

Navy s efforts between 1914 and 1940 to develop effective submarines In particular the author describes the work of the

Navy and private industry that allowed the relatively primitive submersible of the First World War period to be replaced by

the fleet submarine that fought in the Second World War Building American Submarines argues that there was a

fundamental shift in the relationship between the Navy and its submarine suppliers during this period. After being completely dependent upon private industry in 1914 the Navy not industry controlled the design and construction process by the eve of the Second World War. As a result the Navy was able to acquire high quality submarines to fulfill the nation's strategic requirements. When we entered the Second World War these new submarines were ready to undertake prolonged and effective antishipping operations in distant waters. That capability was of enormous importance in the ensuing triumph of American sea power over Imperial Japan. In tracing these developments the author provides insights into the goals of the naval submarine leaders the evolution of the American submarine industry the influence of German underseas technology and strategic requirements foreseen by naval planners. The Navy's historians hope that this case study of the problems and successes involved in a major weapons acquisition program will be of particular interest to naval personnel involved in that process today as well as to representatives of the industrial firms that supply the needs of the modern Navy.
