**Mechanisms and Immunotherapeutic Strategies** Matthew R. Walker, Angela M. Roberts, 1997-05-05 There is now considerable evidence that environmental and social changes including increased urbanisation industrialisation air pollution and large scale arable monoculture have combined to produce an increase in the incidence of various allergies It is currently estimated that more than 1 in 10 individuals are afflicted with some form of allergy which although generally not life threatening cause varying levels of discomfort or debilitation IgE mediated hypersensitivities such as seasonal allergic rhinitis hayfever eczema urticaria and asthma consequently represent considerable medical and socio economic problems To date the clinical management of allergy relies largely either on allergen avoidance and or long term use of pharmacological agents e g steroids and antihistamines However a mass of molecular and cellular immunobiological research has accumulated which provides further insights into the precise mechanisms determining IgE production coupled with exciting possibilities for immunotherapeutic intervention Allergic Mechanisms and Immunotherapeutic Strategies has drawn together contributions from leading scientific and medical researchers in this field The topics discussed include the structural basis of the interaction of human IgE with its receptors the role of recombinant DNA methodologies in the analysis of common plant pollen and mite allergens and the modulation of the allergic cascade by T cells and cytokines In addition to summarising the most important discoveries in their respective areas the contributors have illustrated where their findings could be exploited for the development of immunotherapeutic strategies Given that the incidence of allergic disease is increasing it seems likely that such strategies will have an important role in future clinical management of atopic patients **Encyclopedia of**

**Respiratory Medicine** Geoffrey J. Laurent, Stephen D. Shapiro, 2006 **The Reticuloendothelial System** Herman Friedman, M.R. Escobar, Sherwood M. investigators from many diverse areas it seems advantageous to present in one comprehensive treatise current information and knowledge concerning basic aspects of the RES such as morphology biochemistry phylogeny and ontogeny physiology and pharmacology as well as clinical areas including immunopathology cancer infectious diseases allergy and hypersensitivity It is anticipated that by presenting information concerning these apparently heterogeneous topics under the unifying umbrella of the RES attention will be focused on the similarities as well as interactions among the cell types constituting the RES from the viewpoint of various disciplines The treatise editors and their editorial board consisting predominantly of the editors of individual volumes are extremely grateful for the enthusiastic cooperation undertaken by members of the biomedical community in general and especially and Japanese Reticuloen by members of the American as well as European dothelial Societies *Cancer Immunology, Immunotherapy*, 1992
