Experience Design Marc Hassenzahl, 2010-07-07 In his book *In the blink of an eye* Walter Murch the Oscar awarded editor of *The English Patient* *Apocalypse Now* and many other outstanding movies devises the Rule of Six six criteria for what makes a good cut On top of his list is to be true to the emotion of the moment a quality more important than advancing the story or being rhythmically interesting The cut has to deliver a meaningful compelling and emotion rich experience to the audience Because what they finally remember is not the editing not the camerawork not the performances not even the story it s how they felt Technology for all the right reasons applies this insight to the design of interactive products and technologies the domain of Human Computer Interaction Usability Engineering and Interaction Design It takes an

experiential approach putting experience before functionality and leaving behind oversimplified calls for ease efficiency and automation or shallow beautification Instead it explores what really matters to humans and what it needs to make technology more meaningful The book clarifies what experience is and highlights five crucial aspects and their implications for the design of interactive products It provides reasons why we should bother with an experiential approach and presents a detailed working model of experience useful for practitioners and academics alike It closes with the particular challenges of an experiential approach for design The book presents its view as a comprehensive yet entertaining blend of scientific findings design examples and personal anecdotes
