rounded perspective of the art and science of architectural detailing. In guiding a design from idea to reality, architects design a set of details that show how a structure will be put together. Good details are correct, complete, and provide accurate information to a wide variety of users. By demonstrating the use of detail patterns, this book teaches you how to design a building that will perform as well as you intend. Integrate appropriate detailing into your designs. Learn the latest in materials, assemblies, and construction methods. Incorporate sustainable design principles and current building codes. Design buildings that perform well, age gracefully, and look great. Architects understand that aesthetics are only a small fraction of good design, and that stability and functionality require a deep understanding of how things come together. Architectural Detailing helps you bring it all together with a well-fleshed out design that communicates accurately at all levels of the construction process.

Understanding Steel Design Terri Meyer Boake, 2013-03-04. Understanding Steel Design is based on an overall approach to understand how to design and build with steel from the perspective of its architectural applications. Steel is a material whose qualities have enormous potential for the creation of dynamic architecture. In an innovative approach to the reality of working with steel, the book takes a new look both at the state of tried and tested techniques and at emerging projects. Hundreds of steel structures have been observed, analyzed, and appraised for this book. In-depth construction photographs by the author are complemented by technical illustrations created to look more closely at systems and details. Drawings supplied by fabricators allow greater insight into a method of working with current digital drawing tools.

Teaching and Learning Building Design and Construction David Dowdle, 2013-10-18. Innovation in building design and construction depends on innovative strategies being developed by teachers and practitioners, made available to students and then professionally adopted. Successful transfer of this knowledge relies on appropriate support for both students and academics to ensure the new knowledge is translated into a format appropriate to the learner's current state of understanding, often using a constructivist, student-centred learning approach. This special issue of the journal Architectural Engineering and Design Management examines new strategies to manage effectively a growing number of students and a changing student profile in the built environment sector. Written by international experts in the field, core themes covered include student-centred learning, practice-based learning, good practice and evaluation, and instructional systems design. Several papers are devoted to virtual learning, focusing on e-pedagogy, standardisation, bridging the gap between academia and industry, and virtual learning environments. This peer-reviewed publication will be invaluable reading for lecturers and students on architecture and civil engineering courses, professional architects and engineers, and all interested in T-L continuing professional development and distance learning in the built environment sector.

High-Tech Heritage Matthias Brenner, Silke Langenberg, Kirsten Angermann, Hans-Rudolf Meier, 2024-08-06. High-tech architecture preserving the heritage of innovative construction. The high-tech architecture of the 1970s and 1990s is typically characterized by the use and exhibition of advanced technologies. In terms of appearance, these buildings often have

innovative features supporting structures accentuated in color and expressively displayed technology systems. Unfortunately however the rapid obsolescence of technology has often led to the complete replacement of the very systems that defined the architectural form. In 2023 an international conference at ETH Zurich in collaboration with Bauhaus University Weimar explored the question of how best to deal with the structural legacy of technologically innovative architecture. This book summarizes the results and provides an overview of the current state of research. Current state of research on high tech architecture and its conservation. Overview of the opportunities and challenges of high tech buildings. New findings on the topic of building within existing structures.
