Structural Adjustment Ed Brown, Bob Milward, Giles Mohan, Alfred B. Zack-Williams, 2013-04-15 *Structural Adjustment Theory Practice and Impacts* examines the problems associated with Structural Adjustment Programmes SAPs and reveals the damaging impacts they can have. The book looks at how the debt crisis of the 1970s forced developing countries to seek external help and then reviews what constitutes a standard adjustment programme detailing the political, economic, social and environmental impacts of SAPs. The final section draws together theories and political responses and presents a case for alternatives to the programmes.

Theories and Practices of Development Katie Willis, 2004-06-01 Throughout the twentieth century governments sought to achieve development not only in their own countries but also in other regions of the world, particularly in Africa, Asia, Latin America and the Caribbean. This focus on development as a goal has continued into the twenty-first century, for example through the United Nations Millennium Development Targets. While development is often viewed as something very positive, it is also very important to consider the possible detrimental effects it may have on the natural environment, different social groups and on the cohesion and stability of societies. In this important book, Katie Willis investigates and places in a historical context the development theories behind contemporary debates such as globalization and transnationalism. The main definitions of development and development theory are outlined with a description and explanation of how approaches have changed over time. The differing explanations of inequalities in development, both spatially and socially, and the reasoning behind different development policies are also considered. By drawing on pre-twentieth century European development theories and examining current policies in Europe and the USA, the book not only stresses commonalities in development theorizing over time and space but also the importance of context in theory construction. This topical book provides an ideal introduction to development theories for students in geography, development studies, area studies, anthropology and sociology. It contains student-friendly features including boxed case studies with examples, definitions, summary sections, suggestions for further reading, discussion questions and website information.

Communes and the Venezuelan State Anderson Bean, 2022-03-01 Since 2006 Venezuela has witnessed an explosion of different forms of popular power and participatory democracy Over 47 000 grassroots neighborhood based communal councils and 3 000 communes have been constructed In *Communes and the Venezuelan State The Struggle for Participatory Democracy in a Time of Crisis* Anderson Bean offers a critical analysis of these experiments in popular and workers power and their potential for societal transformation within and beyond Venezuela Drawing on extensive ethnographic research Bean demonstrates how workers and peasants through networks of popular power exercise agency over their own development while facing challenges from the capitalist state Most importantly this book connects with the far reaching implications that the communal movement in Venezuela has for building a society responsive more to the needs of ordinary people than to the desires of the elites *Handbook on Development Policy and Management* Colin H. contexts **Peasant Production and Limits to Labour** Erik Green,2005 The persistence of a low productive peasant sector in sub Saharan Africa is one of the enigmas of development research Green approaches this crucial question by analysing the paths of agrarian change in two contrasting cases in Malawi from the mid 1930s to the late 1970s The two cases Thyolo and Mzimba districts with their differences in terms of population density infrastructure and environmental contexts are compared with a focus on changes in agricultural production and farming systems Target leverage and capital structure adjustment speed across German industries Christian Weidinger,2011-12-14 Seminar paper from the year 2010 in the subject Economics Finance grade 1 3 University of Regensburg language English abstract Since Modigliani Miller s famous theorem 1958 that capital structure is irrelevant for firm valuation firms capital structure choice has been one of the most significant subjects in the modern finance theory The subsequent theoretical literature has found evidence to negate the irrelevance theorem Most empirical studies applied a static framework and are capable to explain differences in the optimal leverage ratios across firms using observed leverage ratios as proxies for the optimal target leverage but do not explain observed differences in firms leverage ratios itself One broadly accepted reason for a firm s deviation from their target leverage ratio is the existence of adjustment costs In the presence of adjustment costs firms may deviate from their target leverage and find it not cost effective to adjust their leverage ratio frequently or fully within one period even if they recognize that their existing capital structure is not optimal This shows the need for developing and using a dynamic approach in order to examine firms capital structure The paper is organized as follows Section 2 provides a brief overview of the three main theories of capital structure Section 3 specifies the dynamic partial adjustment model and describes the variables that may affect the target capital structure as well as the adjustment speed Section 4 reports the empirical results and Section 5 concludes the paper **Human Rights and Contemporary Issues in Africa** Nsongurua J.
