Structure Meaning Of Psychoanalysis:

The Structure and Meaning of Psychoanalysis as Related to Personality and Behavior William Healy, Augusta Fox Bronner, Anna Mae Bowers, 1930 An organized statement of what has been contributed to date in psychoanalysis On the left hand pages are what may be called the orthodox theories and fact findings of psychoanalysis for the most part consisting of Freud's own statements On the right hand in smaller type are introduced a contributions of exegetical value b some notable accessions to the psychoanalytic structure by Freudians and c various ideas set forth by those who still holding the major concepts of Freud offer divergencies of theory or practice Preface

The Method of Response Function in Psychology & Sociology Irina G. Malkina-Pykh, Y. A. Pykh, 2013 Social psychological and sociological systems present considerable difficulties for modellers due to their complexity multidimensionality uncertainty and irreducibility The book proposes that response functions MRF be used as a method of constructing purposeful credible and integrated social systems models from data and prior knowledge or information A semi empirical or grey box MRF model may be regarded as a trade off between a knowledge based model and a black box empirical model It may embody all the existing knowledge on the process or a part thereof and in addition it relies on parameterised functions whose parameters are determined from measurements Observations contain hidden information on the processes under consideration and one of the main purposes of the proposed method is to extract and describe these hidden relationships Parameterisation offers ways to couple qualitative with quantitative analysis This combination makes it possible to take into account all the phenomena that are not modelled with the required accuracy through prior knowledge Although only a simplified picture of the processes is modelled a grey box system model provides some insight into the system processes These processes are featured by chains of causality highlighting stressors and variables responsive to stressors The method of response functions is a nonlinear regression method that implies credible models in the sense that they are identifiable and hopefully explain system output behaviour satisfactorily For case studies the authors have selected the problems usually studied by psychologists and sociologists with statistical procedures such as investigation of variance and discriminant analysis based on the general linear model or one of its multivariate generalisations structural equation models etc disordered eating and obesity subjective well being and alexithymia An accompanying CD ROM contains the demonstration versions of three models that are discussed in the various chapters The Method of Response Functions in Psychology and Sociology is aimed at Mathematical Psychologists Mathematical Sociologists Applied Psychologists Sociologists and Social Practitioners It will also be suitable for use on undergraduate as well as graduate and postgraduate courses specializing in these areas

Philosophic Foundations of Genetic Psychology and Gestalt Psychology Ash Gobar, 2012-12-06 XVI Psychologists have however shown that what we are primarily aware of is not a succession of sense data but figures ground

phenomena Wittgenstein's ambiguous duck rabbit is merely one such example They have also drawn our attention to the existence of tertiary qualities in perception such as symmetry and elegance which are just as directly given as are the perceived colours red green or yellow It is interesting to note that Merleau Ponty has made considerable use of Gestalt ideas in his Phenomenology of Perception One of the commonest reasons given by linguistic philosophers for not making direct use of the results of psychological research although philosophers are usually willing to accept the first hand results of physical science is that philosophical accounts of perception and thinking are concerned with analysing the language in which these reports are made that is to say they are second order enquiries Often this approach is still more restricted and ordinary linguistic usage is taken as the yardstick against which questions relating to thought and perception are to be measured The task of the philosopher is then confined to the analysis of ordinary language If he is more adventurous as some writers on philosophical psychology are he might go on to show how far the language used by psychological researchers falls short of the paradigms of common sense
