Basic properties of groups

$$h = eh = (\tilde{h} g) h = \tilde{h} (gh) = \tilde{h} e = \tilde{h}$$

$$(gh)(h^{-1}g^{-1}) = g(hh^{-1})g^{-1} = geg^{-1} = gg^{-1} = e$$

$$hg = e(hg) = (g^{-1}g)(hg) = (g^{-1}(gh))g = (g^{-1}e)g = g^{-1}g = e$$

Aspects of Abstract Algebra ,1980 Abstract Algebra Joseph H. Silverman,2022-03-07 This abstract algebra textbook takes an integrated approach that highlights the similarities of fundamental algebraic structures among a number of topics The book begins by introducing groups rings vector spaces and fields emphasizing examples definitions homomorphisms and proofs The goal is to explain how all of the constructions fit into an axiomatic framework and to emphasize the importance of studying those maps that preserve the underlying algebraic structure This fast paced introduction is followed by chapters in which each of the four main topics is revisited and deeper results are proven The second half of the book contains material of a more advanced nature It includes a thorough development of Galois theory a chapter on modules and short surveys of additional algebraic topics designed to whet the reader s appetite for further study This book is intended for a first introduction to abstract algebra and requires only a course in linear algebra as a prerequisite The more advanced material could be used in an introductory graduate level course

Introduction to Abstract Algebra Clemens Bernard Hanneken,1968 **Abstract Algebra** Linsen Chou,2015-08 Abstract algebra a broad division of mathematics is the study of algebraic structures Linear algebra elementary number theory and discrete mathematics are sometimes considered branches of abstract algebra Algebraic structures include groups rings fields modules vector spaces lattices and algebra over a field Algebraic structures with their associated homomorphisms form mathematical categories Category theory is a powerful formalism for analyzing and comparing different algebraic structures Universal algebra is a related subject that studies the nature and theories of various types of algebraic structures as a whole For example universal algebra studies the overall theory of groups as distinguished from studying particular groups This book Abstract Algebra is the set of advanced topics of algebra that deal with abstract algebraic structures rather than the usual number systems The most important of these structures are groups rings and fields Important branches of abstract algebra are commutative algebra representation theory and homological algebra
