Clariá,2015-12-11 In November 2015 Buenos Aires Argentina became the location of several important events for geo professionals with the simultaneous holding of the 6th International Symposium on Deformation Characteristics of Geomaterials the 15th Pan American Conference on Soil Mechanics and Geotechnical Engineering XV PCSMGE the 8th South American Congress on Rock Mechanics SCRM as well as the 22nd Argentinean Congress of Geotechnical Engineering CAMSIGXXII This synergy provided a unique opportunity to exchange ideas and discuss current and future practices in the areas of soil mechanics and rock mechanics and their applications in civil energy environmental and mining engineering This book presents the proceedings of the 6th International Symposium on Deformation Characteristics of Geomaterials As well as 118 articles selected for publication after peer review it includes 7 lectures delivered by invited keynote speakers and the Third Bishop Lecture delivered by Professor Herve Di Benedetto of the University of Lyon France who presented a reference work on the advanced testing and modeling of bituminous bounded and unbounded granular materials The conference brought together practitioners researchers and educators from around the world engaged in the understanding of the deformation properties of geo materials before failure and the small strain parameters as fundamental characteristics of geo materials The main topics covered by the symposium include experimental investigations from very small strains to beyond failure including multi physical approach HTC M coupling behavior characterization and modeling of various geo materials and interfaces and practical prediction and interpretation of ground responses field observation and case histories

Long and Deep Tunnels
Vittorio Guglielmetti,Shulin Xu,Gianni Alberto Arrigoni,Piergiorgio Grasso,2016-04-15 The design and construction of long and deep tunnels i e tunnels under mountains characterised by either considerable length and or overburden represent a considerable challenge The scope of this book is not to instruct how to design and construct such tunnels but to share a method to identify the potential hazards related to the process of designing and constructing long and deep tunnels to produce a relevant comprehensive analysis and listing to quantify the probability and consequences and to design proper mitigation measures and countermeasures The design developed using probabilistic methods is verified during execution by means of the so called Plan for Advance of the Tunnel PAT method which allows adapting the design and control parameters of the future stretches of the tunnel to the results of the stretches already finished using the monitoring data base Numerous criteria are given to identify the key parameters necessary for the PAT procedure Best practices of excavation management with the help of real time monitoring and control are also provided Furthermore cost and time evaluation systems are analysed Finally contractual aspects related to construction by contract are investigated for best development and application of models more appropriate for tunnelling construction contracts The work will be of interest to practising engineers designers consultants and students in mining underground tunnelling transportation and construction engineering

Frugal Innovation and the New Product Development Process Stephanie B.M. Cadeddu, Jerome D. Donovan, Cheree Topple, Gerrit A. de Waal, Eryadi K. Masli, 2019-01-17 This book explores the new product development process of firms developing frugal innovation for the base of the pyramid (BOP) markets in developing countries. Frugal innovations are products characterised by an affordable price point, durability, usability and core functionalities that are highly adapted to BOP consumers' needs. Frugal products have the potential to drive the development progress and living standards of low-income consumers. With an innovation framework developed from worldwide frugal case studies, this book provides detailed insights through two in-depth start-up firms in Indonesia that have successfully launched frugal products for the low-income market. These two start-ups have addressed two major development challenges for not just Indonesia but also the global BOP market: traditional methods of cooking and access to clean drinking water. A detailed roadmap is developed from insights into the processes and management decisions of these two start-ups and combined with previous studies on frugal products. Providing a detailed roadmap across the different phases and stages of the new product development process when developing frugal products, this book will be insightful to not only innovators but also investors and government agencies supporting their activities.
