Structure Approximation In Physical Theories:

Structure and Approximation in Physical Theories A. Hartkamper, 2013-11-11 The present volume contains 14 contributions presented at a colloquium on Structure and Approximation in Physical Theories held at Osnabruck in June 1980. The articles are presented in the revised form written after the colloquium and hence also take account of the results of the discussion at the colloquium. It is a striking feature that the problem of approximation in physical theories has only recently found some attention in the philosophy of science although the working physicist is constantly confronted with those questions. No interesting theory of exact science exactly fits its experimental data almost every relation between different theories is an approximate one. Therefore an adequate reconstruction of physical theories must take into account and conceptualize the moment of approximation. The majority of the articles in this book is centered around this subject. There are at least two elaborate structuralistic approaches to the formalization of physical theories in which the aspect of approximation has been incorporated: the approach due to P. Suppes, J. Sneed, W. Stegmüller, S. approach and the approach of G. Ludwig and his co-workers, L. approach. The articles in this book correspondingly fall into three classes: presentation, elaboration and critique of the L. approach (Hartkamper, Schmidt, Ludwig, Neumann, Werner, Schmidt, Mayr, Kamiah, Majer, Grafe) or of the S. approach (Moulines, Balzer, Cooke) and articles referring to both approaches or concerned with related matters (Scheibe, Pfarr, Castiglione). Of course this is only a rough classification and each article must be appraised in its own right.

A New Foundation of Physical Theories Günther Ludwig, Gerald Thurler, 2007-12-11 Written in the tradition of G. Ludwig's groundbreaking works this book aims to clarify and formulate more precisely the fundamental ideas of physical theories. By introducing a basic descriptive language of simple form in which it is possible to formulate recorded facts ambiguities of physical theories are avoided as much as possible. In this approach the field of physics that should be described by a theory is determined by basic concepts only, i.e. concepts that can be explained without a theory. In this context the authors introduce a new concept of idealization and review the process of discovering new concepts. They believe that when the theories are formulated within an axiomatic basis solutions can be found to many difficult problems such as the interpretation of physical theories, the relations between theories as well as the introduction of physical concepts. The book addresses both physicists and philosophers of science and should encourage the reader to contribute to the understanding of the lasting core of physical knowledge about the real structures of the world.

The present volume contains the text of the invited lectures presented at the Symposium on Many Body Methods in Quantum Chemistry held on the campus of Tel Aviv University in August 1988. The Symposium was a satellite meeting of the Sixth International Congress on Quantum Chemistry held in Jerusalem. The development and application of many body methods in Quantum chemistry have been on the rise for a number of years. This is therefore a good time for an interim report on the state of the

field It is hoped that such a report is hereby provided though it may not be complete The Symposium was held under the auspices of Tel Aviv University Raymond and Beverly Sackler Faculty of Exact Sciences School of Chemistry Other sponsors were the Israeli Academy of Sciences and Humanities and the Israeli Ministry of Science and Development Many thanks go to all of them Finally I would like to thank all the speakers and participants for making the meeting the enjoyable and I hope profitable experience it was Tel Aviv Israel Uzi Kaldor TESTS AND APPLICATIONS OF COMPLETE MODEL SPACE
