Selman,2012-12-06 In 1965 Juris Hartmanis and Richard E Stearns published a paper On the Computational Complexity of Algorithms The field of complexity theory takes its name from this seminal paper and many of the major concepts and issues of complexity theory were introduced by Hartmanis in subsequent work In honor of the contribution of Juris Hartmanis to the field of complexity theory a special session of invited talks by Richard E Stearns Allan Borodin and Paul Young was held at the third annual meeting of the Structure in Complexity conference and the first three chapters of this book are the final versions of these talks They recall intellectual and professional trends in Hartmanis contributions All but one of the remainder of the chapters in this volume originated as a presentation at one of the recent meetings of the Structure in Complexity Theory Conference and appeared in preliminary form in the conference proceedings In all these expositions form an excellent description of much of contemporary complexity theory *Proceedings* ,1989 *Designing for the 21st Century* Tom Inns,2021-09-02 As we become familiar with the 21st century we can see that what we are designing is

changing new technologies support the creation of new forms of product and service and new pressures on business and society demand the design of solutions to increasingly complex problems sometimes local often global in nature Customers users and stakeholders are no longer passive recipients of design expectations are higher and increased participation is often essential This book explores these issues through the work of 21 research teams Over a twelve month period each of these groups held a series of workshops and events to examine different facets of future design activity as part of the UK s research council supported Designing for the 21st Century Research Initiative Each of these 21 contributions describes the context of enquiry the journey taken by the research team and key insights generated through discourse Editor and Initiative Director Tom Inns provides an introductory chapter that suggests ways that the reader might navigate these different viewpoints

Proceedings, Structure in Complexity Theory, Second Annual Conference ,1987 Theory of Semi-Feasible Algorithms Lane A. Hemaspaandra, Leen Torenvliet, 2002-10-28 The primary goal of this book is unifying and making more widely accessible the vibrant stream of research spanning more than two decades on the theory of semi feasible algorithms In doing so it demonstrates the richness inherent in central notions of complexity running time nonuniform complexity lowness and NP hardness The book requires neither great mathematical maturity nor an extensive background in computational complexity theory or in computer science Another aim of this book is to lay out a path along which the reader can quickly reach the frontiers of current research and meet and engage the many exciting open problems in this area
