

# Structured programming in COBOL—the current options

J. M. Triance

Computation Department, University of Manchester, Institute of Science and Technology,

The problems of writing structured programs in COBOL as defined by the Current Standard and by CODASYL are examined. Four versions of structured COBOL supported by preprocessors are presented and some criteria for judging preprocessors are proposed.

(Received March 1979; amended April 1979 and July 1979)

The principles of structured programming are now widely understood and applied. Central to the concept are the three basic program constructs: sequence, selection and iteration. It is usually presupposed that the program will be divided in communicating processes (or modules) as a consequence of the program design method (ref. top-down programming (Steveas, Myers and Constantine, 1974) and inversion (Jackson, 1975)). To some people structured programming also involves basing the program structure on the problem structure. This can lead to backtracking and a need to resolve structure clashes (Jackson, 1975). This paper makes no attempt to evaluate the different forms of structured programming but instead, for commonly held views of the technique, it examines the problems of using COBOL as the programming language.

The motivation for applying structured programming techniques is to produce programs which are easy to read and maintain. It is possible to design programs using these techniques and then translate the design into COBOL. But if, as is normally the case, the COBOL source listing forms a major part of the documentation it is important that the program's structure is readily discernible from the source listing. This cannot easily be achieved in current versions of COBOL, which were in general specified when the term 'structured programming' meant nothing to the COBOL community. In particular IF's cannot be used to implement all forms of nested selections, there is no construct for selections with more than two alternatives, there is no construct specifically designed

for iterations, no construct for backtracking and the features for communicating processes are inadequate for some variations of structured programming.

CODASYL (1978) has recognised some of these problems and its solutions are presented in this paper. Since there will be a few years delay before these enhancements are generally available to COBOL programmers this paper also investigates alternative ways of implementing the new structures. Equivalent forms in American National Standard 1974 COBOL (ANSI, 1974) are presented. Four versions of structured COBOL are also investigated. They are Michael Jackson's Schematic Logic (1975; 1979; Triance and Yow, 1979), IBM's SCOBOL (1970), ADR's MetaCOBOL (1970) and Software Science's CASTLE (1970). All of these are supported by COBOL preprocessors.

Each feature of structured COBOL is considered separately.

## Explicit scope terminators

END-IF has been introduced to CODASYL COBOL for the purpose of terminating the scope of a nested IF statement. This is needed when a statement (S3 in Fig. 1) which is within the scope of an outer IF statement is to be executed after each branch of the nested IF.

In this and subsequent extracts of coding C1 and C2 represent conditions and S1, S2 and S3 represent a sequence of imperative statements. P1, P2, etc. will be used for procedure names.

The equivalent coding in ANSI 74 COBOL is shown in Fig. 2. If the coding is produced by automatic or semi-mechanical translation from a structured design language (such as schematic logic (Jackson, 1975) or pseudo-code (IBM, 1970)) then it will probably resemble approach 1. This coding is many respects is the closest to Fig. 1 but its correspondence to the original structure is obscure. Approach 2 will in many cases be undesirable because it enforces the wide separation of the nested IF from the outer IF. Approach 3 will normally be 'readable' but the repetition of S3 involves extra coding (it could be several lines) with the added opportunity for errors. In some cases of further levels of nesting this approach would

The Top Books of the Year Structured Cobol I M Wb 21 The year 2023 has witnessed a remarkable surge in literary brilliance, with numerous captivating novels enthralling the hearts of readers worldwide. Lets delve into the realm of popular books, exploring the captivating narratives that have enthralled audiences this year. The Must-Read : Colleen Hoovers "It Ends with Us" This poignant tale of love, loss, and resilience has captivated readers with its raw and emotional exploration of domestic abuse. Hoover expertly weaves a story of hope and healing, reminding us that even in the darkest of times, the human spirit can succeed. Uncover the Best : Taylor Jenkins Reids "The Seven Husbands of Evelyn Hugo" This intriguing historical fiction novel unravels the life of Evelyn Hugo, a Hollywood icon who defies expectations and societal norms to pursue her dreams. Reids compelling storytelling and compelling characters transport readers to a bygone era, immersing them in a world of glamour, ambition, and self-discovery. Structured Cobol I M Wb 21 : Delia Owens "Where the Crawdads Sing" This evocative coming-of-age story follows Kya Clark, a young woman who grows up alone in the marshes of North Carolina. Owens spins a tale of resilience, survival, and the transformative power of nature, captivating readers with its evocative prose and mesmerizing setting. These popular novels represent just a fraction of the literary treasures that have emerged in 2023. Whether you seek tales of romance, adventure, or personal growth, the world of literature offers an abundance of captivating stories waiting to be discovered. The novel begins with Richard Papen, a bright but troubled young man, arriving at Hampden College. Richard is immediately drawn to the group of students who call themselves the Classics Club. The club is led by Henry Winter, a brilliant and charismatic young man. Henry is obsessed with Greek mythology and philosophy, and he quickly draws Richard into his world. The other members of the Classics Club are equally as fascinating. Bunny Corcoran is a wealthy and spoiled young man who is always looking for a good time. Charles Tavis is a quiet and reserved young man who is deeply in love with Henry. Camilla Macaulay is a beautiful and intelligent young woman who is drawn to the power and danger of the Classics Club. The students are all deeply in love with Morrow, and they are willing to do anything to please him. Morrow is a complex and mysterious figure, and he seems to be manipulating the students for his own purposes. As the students become more involved with Morrow, they begin to commit increasingly dangerous acts. The Secret History is a exceptional and gripping novel that will keep you speculating until the very end. The novel is a warning tale about the dangers of obsession and the power of evil.
