technology advances provide that a great number of system signals can be easily measured with a low cost The main problem is that usually only a fraction of the signal is useful for different purposes for example maintenance DVD recorders computers electric electronic circuits econometric optimization etc Digital filters are the most versatile practical and effective methods for extracting the information necessary from the signal They can be dynamic so they can be automatically or manually adjusted to the external and internal conditions Presented in this book are the most advanced digital filters including different case studies and the most relevant literature

Digital Signal Processing in Power System Protection and Control

Waldemar Rebizant,Janusz Szafran,Andrzej Wiszniewski,2011-07-28 Digital Signal Processing in Power System Protection and Control bridges the gap between the theory of protection and control and the practical applications of protection equipment Understanding how protection functions is crucial not only for equipment developers and manufacturers but also for their users who need to install set and operate the protection devices in an appropriate manner After introductory chapters related to protection technology and functions Digital Signal Processing in Power System Protection and Control presents the digital algorithms for signal filtering followed by measurement algorithms of the most commonly used protection criteria values and decision making methods in protective relays A large part of the book is

devoted to the basic theory and applications of artificial intelligence techniques for protection and control Fuzzy logic based schemes artificial neural networks expert systems and genetic algorithms with their advantages and drawbacks are discussed AI techniques are compared and it is also shown how they can be combined to eliminate the disadvantages and magnify the useful features of particular techniques The information provided in Digital Signal Processing in Power System Protection and Control can be useful for protection engineers working in utilities at various levels of the electricity network as well as for students of electrical engineering especially electrical power engineering It may also be helpful for other readers who want to get acquainted with and to apply the filtering measuring and decision making algorithms for purposes other than protection and control everywhere fast and on line signal analysis is needed for proper functioning of the apparatus
