Space Communications:

Review of the Space Communications Program of NASA's Space Operations Mission Directorate National Research Council, Division on Engineering and Physical Sciences, Aeronautics and Space Engineering Board, Committee to Review NASA's Space Communications Program, 2007-02-16 The Space Communications Office SCO at NASA has two primary roles. The first is to manage two of the communications networks that enable spaceflight operations and research and the second is to integrate agency wide telecommunications issues. In 2005 NASA asked the NRC to review the effectiveness of the SCO in carrying out its responsibilities by assessing the overall quality of the space communications program. This report presents a review of each of the program elements within the SCO: the space network, NASA's integrated space network, NISN, spectrum management, standards management, search and rescue communications and navigation architecture, technology and operations integration. The review focuses on formulation of plans for each element, plan development methodology, connections with the broader community and overall capabilities. Recommendations for improving SCO operations and organization are provided.

Deep Space Communications Jim Taylor, 2016-08-29 DEEP SPACE COMMUNICATIONS A COLLECTION OF SOME OF THE JET PROPULSION LABORATORY'S SPACE MISSIONS SELECTED TO REPRESENT THE PLANETARY COMMUNICATIONS DESIGNS FOR A PROGRESSION OF VARIOUS TYPES OF MISSIONS. The text uses a case study approach to show the communications link performance resulting from the planetary communications design developed by the Jet Propulsion Laboratory JPL. This is accomplished through the description of the design and performance of six representative planetary missions. These six cases illustrate progression through time of the communications system's capabilities and performance from 1970s technology to the most recent missions. The six missions discussed in this book span the Voyager flybys in the 1970s, Galileo for orbiters in the 1980s, Deep Space 1 for the 1990s, Mars Reconnaissance Orbiter MRO for planetary orbiters, Mars Exploration Rover MER for planetary rovers in the 2000s, and the MSL rover in the 2010s. Deep Space Communications Provides an overview of the Deep Space Network and its capabilities. Examines case studies to illustrate the progression of system design and performance from mission to mission and provides a broad overview of the mission systems described. Discusses actual flight mission telecommunications performance of each system. Deep Space Communications serves as a reference for scientists and engineers interested in communications systems for deep space telecommunications link analysis and design control.
