Space Station Automation III Wun C. Chiou,1987 **Computer-Aided Mechanical Assembly Planning** Luis S. Homem de Mello,Sukhan Lee,2012-12-06 Some twenty years have elapsed since the first attempts at planning were made by researchers in artificial intelligence These early programs concentrated on the development of plans for the solution of puzzles or toy problems like the rearrangement of stacks of blocks These early programs provided the foundation for the work described in this book the automatic generation of plans for industrial assembly As one reads about the complex and sophisticated planners in the current generation it is important to keep in mind that they are addressing real world problems Although these systems may become the toy systems of tomorrow they are providing a solid foundation for future more general and more advanced planning tools As demonstrated by the papers in this book the field of computer aided mechanical assembly planning is maturing It now may include geometric descriptions of parts extracted from or compatible with CAD programs constraints related to part interference and the use of tools fixtures and jigs required for the assembly the nature of connectors matings and other relations between parts number of turnovers required during the assembly handling and gripping requirements for various parts automatic identification of subassemblies This is not an exhaustive list but it serves to illustrate the complexity of some of the issues which are discussed in this book Such issues must be considered in the design of the modern planners as they produce desirable assembly sequences and precedence relations for assembly **Technology for Large Space Systems** ,1989 *Management* ,1990 **Management, a Bibliography for NASA Managers** ,1989 *Geometric Modeling for Product Engineering* Michael J. Wozny,J. U. Turner,K. Preiss,1990 The papers in this collection provide an insight into current research issues and directions in geometric modeling Like many other fields in the past geometric modeling is making the transition from the empirical stage to a maturity based on formal theories and procedures The data structures and algorithms are also being treated on a more rigorous basis using the formal procedures of computer science Until recently researchers were concerned more with modeling the basic geometry and topology of individual parts However as in this volume attention is now focused upon the specification of a complete engineering model of a product Emphasis is given to the role of features and to the modeling of assemblies tolerances and processes Constraints parametric design and variational geometry have all become important Non manifold topology has become essential for the representation of adjacency information *Scientific and Technical Aerospace Reports* ,1985 Cooperative Intelligent Robotics in Space III Jon D. Erickson,1992 *International Aerospace Abstracts* ,1989 **Space Station Systems** ,1989 *Mobile Robots* ,1991 **Cooperative Intelligent Robotics in Space** ,1992 **Space Station Systems: A Bibliography with Indexes (supplement 2)** ,1986 Applications of Artificial Intelligence 1993 : Knowledge-based Systems in Aerospace and Industry Ramasamy Uthurusamy,1993 Journal of Intelligent Systems ,1995 **Intelligent Robots and Computer Vision** ,1987 *Intelligent Robots and Computer Vision*
