Soviet Heavy Interceptors:

Soviet Heavy Interceptors Yefim Gordon, 2004 In the nervous 1950s the Soviet Union faced the task of defending its borders against intrusions by Western spyplanes and deterring an attack by Western bomber armadas. The mission was to intercept incoming adversaries at long range which required plenty of engine power, ample fuel and heavy armament. Several Soviet design bureaus took on this priority task. The first heavy interceptor from the Mikoyan stable was the swept wing I-3 of 1956 which, though never flown, was the precursor of the cannon armed I-7U and the missile armed I-75. These were followed by the delta winged Ye-150 series of the late 1950s and early 1960s, the single engined Ye-150 and Ye-152 and the twin engined Ye-152A. Known to the outside world as the Ye-166, the huge Ye-152M set an impressive speed record of 2,681 km/h on 7th July 1962. These aircraft paved the way for the MiG-25 interceptor. Other contenders included the Sukhoi T-37, terminated by government order before it had a chance to fly. Even the Tupolev OKB, traditionally specializing in heavy bombers and airliners, developed the twin engined Tu-128, the world's largest interceptor which was so huge that it was initially mistaken for a medium bomber.

The Fire of the Gods: Oppenheimer's Legacy - The Evolutionary History of Nuclear Age - Part 3 - 1970-1980

Rajat Narang, 2024-01-23 The Book 3 of the series based on recently declassified documents by the CIA, US State Department, KGB, and other international agencies takes off at the onset of the 1970s decade when, after having developed and deployed hundreds of ICBMs and SLBMs armed to the teeth with megaton class thermonuclear warheads, both the US and the USSR were faced with the urgent need to invest billions of dollars once again towards the development of Anti Ballistic Missile ABM Systems to protect themselves against the ICBMs. The Soviets incredibly had deployed around 1,000 heavy ICBMs, hosting a massive, insane 6,000 megatons worth of thermonuclear warheads, collectively posing a grave danger to the US homeland as well as NATO allies, while the US had a clear overmatch in Heavy Bombers and SLBMs over the Soviets. The cost of development of a comprehensive ABM System to secure the entire US had been pegged at 40 billion in the mid 1960s, equivalent of almost 400 billion today, which still would have sparked another arms race between them. Both the superpowers, however, chose to instead negotiate to mutually limit the scope of the threat and shake hands, which paved the way for détente and arms control agreements under SALT I in 1972, a groundbreaking event followed by the Helsinki Accords in 1975, which briefly altered the course of the Cold War.

Antonov Jet Twins E. Gordon, Yefim Gordon, Dmitrii Komissarov, 2005 The need to provide a state-of-the-art jet successor to the ubiquitous An-26 led Antonov to develop a twin-turbofan tactical airlifter, the An-72, which made use of the Coanda effect, improving wing lift and field performance dramatically. The prototype flew in 1977, but it was not until the mid 1980s that production began in Khar'kov. The baseline military airlifter soon spawned a wide selection of derivatives. First was the An-74, originally conceived as a specialized version for Arctic and Antarctic support; it entered production as an ordinary civil transport. Concerted efforts by the Antonov OKB to enhance the capabilities of the An-72/An-74 family led to the development

of the An 72P armed border patrol version the convertible cargo passenger An 747T and An 74TK the An 74S flying hospital and the radically redesigned An 74TK 300 with engines on underwing pylons an arrangement which improved the all important economic efficiency The most intriguing An 72 derivative was the unorthodox An 71 AEW aircraft originally meant for shipboard operations it was prevented from entering production by the political and economic situation

winning journalist Frances FitzGerald gives us a wholly original portrait of Ronald Reagan Drawing on extensive research FitzGerald shows how Reagan managed to get billions in funding for a program that was technologically impossible by exploiting the fears of the American public The Reagan who emerges from FitzGerald's book was a gifted politician with a deep understanding of the national psyche and an executive almost totally disengaged from the policies of his administration Both appalling and funny Way Out There in the Blue is the most penetrating study of Reagan's presidency to date **U.S.**
