## Summer Sleep:

**Seasonal Sleep Patterns** Jenny Smith, AI, 2025-02-17 *Seasonal Sleep Patterns* explores the fascinating ways our sleep and overall health are influenced by the changing seasons. The book delves into chronobiology, revealing how daylight, temperature, and other environmental cues known as zeitgebers synchronize our internal biological rhythms. Understanding these rhythms is crucial as disruptions can negatively impact everything from sleep quality to hormonal fluctuations. The book progresses logically, starting with the basics of circadian rhythms and then examining the role of melatonin, a key hormone influenced by light exposure. It also investigates how temperature and food availability affect sleep in both humans and animals. *Seasonal Sleep Patterns* ultimately provides evidence-based strategies for adapting to seasonal changes, including sleep optimization techniques and the use of light therapy for seasonal affective disorder. This book stands out by connecting diverse fields like endocrinology, ecology, and psychology to provide a holistic view of seasonal rhythms.

By understanding how our bodies are attuned to the cyclical nature of the seasons, readers can gain practical insights for improving their health and fitness year-round. **Sleep and Health** Michael A. Grandner, 2019-04-17 *Sleep and Health* provides an accessible yet comprehensive overview of the relationship between sleep and health at the individual, community, and population levels, as well as a discussion of the implications for public health, public policy, and interventions. Based on a firm foundation in many areas of sleep health research, this text further provides introductions to each sub-area of the field and a summary of the current research for each area. This book serves as a resource for those interested in learning about the growing field of sleep health research, including sections on social determinants, cardiovascular disease, cognitive functioning, health behavior theory, smoking, and more. Highlights the important role of sleep across a wide range of topic areas. Addresses important topics such as sleep disparities, sleep and cardiometabolic disease risk, real world effects of sleep deprivation, and public policy implications of poor sleep. Contains accessible reviews that point to relevant literature in often overlooked areas, serving as a helpful guide to all relevant information on this broad topic area.

**Handbook of Sleep Research**, 2019-06-21 *Handbook of Sleep Research* Volume 30 provides a comprehensive review of the current status of the neuroscience of sleep research. It begins with an overview of the neural, hormonal, and genetic mechanisms of sleep and wake regulation before outlining the various proposed functions of sleep and the role it plays in plasticity and in learning and memory. Finally, the book discusses disorders of sleep and waking, covering both lifestyle factors that cause disrupted sleep and psychiatric and neurological conditions that contribute to disorders. Emphasizes a comparative and multidisciplinary approach to the topic of sleep. Covers the neurobiology and physiology of sleep stages, mechanisms of waking and dreaming. Discusses in detail the proposed functions of sleep from health and rest to memory consolidation and synaptic plasticity. Examines the current state of research in mammalian and non-mammalian species, ranging from primates to invertebrates.

**Resilient Thermal Comfort** Fergus Nicol, Hom Bahadur Rijal, Susan Roaf, 2022-04-19 This book brings together some of the finest academics in the field to address important questions around the way in which people experience their physical environments including temperature light air quality acoustics and so forth. It is of importance not only to the comfort people feel indoors but also the success of any building as an environment for its stated purpose. The way in which comfort is produced and perceived has a profound effect on the energy use of a building and its resilience to the increasing dangers posed by extreme weather events and power outages caused by climate change. Research on thermal comfort is particularly important not only for the health and well being of occupants but because energy used for temperature control is responsible for a large part of the total energy budget of the built environment. In recent years there has been an increasing focus on the vulnerabilities of the thermal comfort system how and why are buildings failing to provide safe and agreeable thermal environments at an affordable price. Achieving comfort in buildings is a complex subject that involves physics behaviour physiology energy conservation climate change and of course architecture and urban design. Bringing together the related disciplines in one volume lays strong multi disciplinary foundations for new research and design directions for resilient 21st century architecture. This book heralds workable solutions and emerging directions for key fields in building the resilience of households organisations and populations in a heating world.

*Earthly* Erica Funkhouser, 2008 Erica Funkhouser's fifth collection considers what it means to be earthly. These are poems in which a one eyed hawk observes us from the wide realm of his rapt patience and a group of long buried foundation stones works its way back to the earth's surface like ceremonial animals their throats unslit. The central poem in the collection Pome cuts into the mythos of Johnny Appleseed the biology of apples and the poet's own experience of growing up on a farm. The final section of the book contains sonnets written as an homage to the Holy Sonnets of John Donne witty graceful poems that limn the coming into consciousness of a young poet. A departure from Funkhouser's previous historical narratives and her compressed lyrics the expansive poems in *Earthly* are sure to deliver this poet her greatest recognition yet.

**The Mystic Mind** Jerome Kroll, Bernard Bachrach, 2006-06-01 A fascinating collaboration between a medieval historian and a professor of psychiatry this enthralling book applies modern biological and psychological research findings to the lives of medieval mystics and ascetics. Drawing upon a database of over 1 400 medieval holy persons and in depth studies of individual saints this illuminating study examines the relationship between medieval mystical experiences the religious practices of mortification laceration of the flesh sleep deprivation and extreme starvation and how these actions produced altered states of consciousness and brain function in the heroic ascetics. Examining and disputing much contemporary writing about the political and gender motivations in the medieval quest for a closeness with God this is essential reading for anyone with an interest in medieval religion or the effects of self injurious behaviour on the mind.
