Persistence, Runs, and Recurrence of Visibility Iver A. Lund, D. D. Grantham, 1978 A total of 511 056 hourly observations of visibility taken over a 13 year period at nine stations was studied to obtain a better understanding of the characteristics of persistence runs and recurrence Each hourly visibility observation was categorized as either greater than or equal to 10 miles greater than or equal to 5 miles less than or equal to 3 miles less than or equal to 1 mile in summer or less than or equal to 0 25 mile in winter Probabilities of each category were estimated from relative frequencies determined from this large data sample and were compared with some theoretical models The models can be applied to estimate the probability that any visibility category will be observed for sequences of x hours or more for exactly x hours or at time t and also at time t x hours Author Merchant Vessels of the United States...
