**Access to Non-Summary Clinical Trial Data for Research Purposes Under EU Law** Daria Kim, 2021-10-19 This book draws a unique perspective on the regulation of access to clinical trial data as a case on research and knowledge externalities Notwithstanding numerous potential benefits for medical research and public health many jurisdictions have struggled to ensure access to clinical trial data even at the level of the trial results Pro access policy initiatives have been strongly opposed by research based drug companies arguing that mandatory data disclosure impedes their innovation incentives Conventionally access to test data has been approached from the perspective of transparency and research ethics The book offers a complementary view and considers access to individual patient level trial data for exploratory analysis as a matter of research and innovation policy Such approach appears to be especially relevant in the data driven economy where digital data constitutes a valuable economic resource The study seeks to define how the rules of access to clinical trial data should be designed to reconcile the policy objectives of leveraging the research potential of data through secondary analysis on the one hand and protecting economic incentives of research based drug companies on the other hand Overall it is argued that the mainstream innovation based justification for exclusive control over the outcomes of research and development can hardly rationalise trial sponsors control over primary data from trials Instead access to such data and its robust analysis should be prioritised      **Resources in Education** , 1992 Serves as an index to Eric reports microform      **The Survival Kit**
