web the solution s to a quadratic equation can be calculated using the quadratic formula the means we need to do a plus and a minus so there are normally two solutions the blue part $b^2 - 4ac$ is called the discriminant because it can discriminate between the possible types of answer when it is positive we get two real solutions

web good question the answer to a problem like this is usually written as the square root of the number for example if we had an equation like $x^2 = 57$ where the square root of 57 would be the value for x then it is normally written $x = \sqrt{57}$ use the quadratic formula to solve the equation $0 = -7q \pm \sqrt{7^2 + 4 \cdot 9}$ now
