### Description

The high speed NAVIGAT X Mk 1 is a microprocessor controlled gyrocompass system with integrated automatic north speed error correction.

The unique method of supporting the gyrosphere by means of mere buoyancy ensures north stabilization during short power interruptions. No more than 2° error may be expected after a loss of power for 3 minutes and once the power is restored, the correct heading will be achieved without the normal settling period. This combined with twin rotors virtually eliminates error in latitude.

The gyrocompass provides 12 independent serial data outputs to analogue or digital repeaters.

Integrated monitoring and alarm functions for the power supply, gyroscope temperature and current and the follow-up system ensure secure and trouble-free system operation.

The single unit design with low-weight hard polyurethane foam housing allows the gyrocompass to be installed on any bridge.

An optional switch-over unit for twin gyrocompasses provides for complete redundancy of all input and output signals and thus ensures the independence of the individual compasses.
