Some Generalized Kac Moody Algebras With Known Root Multiplicities:

Some Generalized Kac-Moody Algebras with Known Root Multiplicities Peter Niemann, 2002 Starting from Borcherds fake monster Lie algebra this text constructs a sequence of six generalized Kac Moody algebras whose denominator formulas, root systems and all root multiplicities can be described explicitly. The root systems decompose space into convex holes of finite and affine type similar to the situation in the case of the Leech lattice. As a corollary we obtain strong upper bounds for the root multiplicities of a number of hyperbolic Lie algebras including AE_3 . *Some Generalized Kac-Moody Algebras with Known Root Multiplicities* Nanhua Xi, Peter Niemann, 2014-09-11 Introduction Generalized Kac Moody algebras Modular forms Lattices and their Theta functions The proof of Theorem 1.7 The real simple roots Hyperbolic Lie algebras Appendix A Appendix B Bibliography Notation *On Some Generalized Kac-Moody Algebras with Known Root Multiplicities* Peter Niemann, 1994 **Recent Advances in Representation Theory, Quantum Groups, Algebraic Geometry, and Related Topics**

Pramod M. Achar, Dijana Jakelić, Kailash C. Misra, Milen Yakimov, 2014-08-27 This volume contains the proceedings of two AMS Special Sessions: Geometric and Algebraic Aspects of Representation Theory and Quantum Groups and Noncommutative Algebraic Geometry held October 13-14, 2012 at Tulane University, New Orleans, Louisiana. Included in this volume are original research and some survey articles on various aspects of representations of algebras including Kac Moody algebras, Lie superalgebras, quantum groups, toroidal algebras, Leibniz algebras and their connections with other areas of mathematics and mathematical physics. *Automorphic Forms and Lie Superalgebras* Urmie Ray, 2007-03-06 A principal ingredient in the proof of the Moonshine Theorem connecting the Monster group to modular forms is the infinite dimensional Lie algebra of physical states of a chiral string on an orbifold of a 26 dimensional torus called the Monster Lie algebra. It is a Borcherds Kac Moody Lie algebra with Lorentzian root lattice and has an associated automorphic form having a product expansion describing its structure. Lie superalgebras are generalizations of Lie algebras useful for depicting supersymmetry, the symmetry relating fermions and bosons. Most known examples of Lie superalgebras with a related automorphic form such as the Fake Monster Lie algebra whose reflection group is given by the Leech lattice arise from super string theory and can be derived from lattice vertex algebras. The No Ghost Theorem from dual resonance theory and a conjecture of Berger Li-Sarnak on the eigenvalues of the hyperbolic Laplacian provide strong evidence that they are of rank at most 26. The aim of this book is to give the reader the tools to understand the ongoing classification and construction project of this class of Lie superalgebras and is ideal for a graduate course. The necessary background is given within chapters or in appendices.

Proceedings of the International Congress of Mathematicians S.D. Chatterji, 2012-12-06 Since the first ICM was held in Zürich in 1897 it has become the pinnacle of mathematical gatherings. It aims at giving an overview of the current state of different branches of mathematics and its applications as well as an insight into the treatment of special problems of exceptional importance. The proceedings of the ICMs have provided a rich chronology of mathematical development in all its

branches and a unique documentation of contemporary research They form an indispensable part of every mathematical library The Proceedings of the International Congress of Mathematicians 1994 held in Zürich from August 3rd to 11th 1994 are published in two volumes Volume I contains an account of the organization of the Congress the list of ordinary members the reports on the work of the Fields Medalists and the Nevanlinna Prize Winner the plenary one hour addresses and the invited addresses presented at Section Meetings 1-6 Volume II contains the invited address for Section Meetings 7-19 A complete author index is included in both volumes the content of these impressive two volumes sheds a certain light on the present state of mathematical sciences and anybody doing research in mathematics should look carefully at these Proceedings For young people beginning research this is even more important so these are a must for any serious mathematics library The graphical presentation is as always with Birkhäuser excellent Revue Roumaine de Mathématiques pures et Appliquées **Current Developments in Mathematics**, 1996 *First European Congress of Mathematics* Anthony Joseph, 1994 *The Singular Theta Correspondence, Lorentzian Lattices and Borcherds-Kac-Moody Algebras* Alexander Graham Barnard, 2003 Mathematical Reviews, 2008 **Sūgaku Expositions**, 2004 **Nagoya Mathematical Journal**, 2001 Issue for Mar 1970 dedicated to Professor Katuzi Ono on his 60th birthday with portrait sketch of his life and list of mathematical papers Number Theory, Geometry and Related Topics, 1996 Index to Theses with Abstracts Accepted for Higher Degrees by the Universities of Great Britain and Ireland and the Council for National Academic Awards, 1995 Theses on any subject submitted by the academic libraries in the UK and Ireland
