Supercritical Fluid Cleaning Fundamentals Technology And Applications:

Supercritical Fluid Cleaning Samuel P. Sawan, 1998-12-31 Although supercritical fluid SCF technology is now widely used in extraction and purification processes in the petrochemical food and pharmaceuticals industries this book is the first to address the new application of cleaning. The objective is to provide a roadmap for readers who want to know whether SCF technology can meet their own processing and cleaning needs. It is particularly helpful to those striving to balance the requirements for a clean product and a clean environment. The interdisciplinary subject matter will appeal to scientists and engineers in all specialties ranging from materials and polymer sciences to chemistry and physics. It is also useful to those developing new processes for other applications and references given at the end of each chapter provide links to the wider body of SCF literature. The book is organized with topics progressing from the fundamental nature of the supercritical state through process conditions and materials interactions to economic considerations. Practical examples are included to show how the technology has been successfully applied. The first four chapters consider principles governing SCF processing detailing issues such as solubility design for cleanability and the dynamics of particle removal. The next three chapters discuss surfactants and microemulsions SCF interaction with polymers and the use of supercritical carbon dioxide CO₂ as a cleaning solvent. The closing chapters focus on more practical considerations such as scaleup equipment costs and financial analysis.

Developments in Surface Contamination and Cleaning - Vol 5 Rajiv Kohli, Kashmiri L. Mittal, 2012-12-31 In this series Rajiv Kohli and Kash Mittal have brought together the work of experts from different industry sectors and backgrounds to provide a state of the art survey and best practice guidance for scientists and engineers engaged in surface cleaning or dealing with the consequences of surface contamination. This volume complements Volumes 3 and 4 of this series which focused largely on particulate contaminants. The expert contributions in this volume cover methods for removal of non particulate contaminants such as metallic and non metallic thin films hydrocarbons toxic and hazardous chemicals and microbiological substances as well as contamination monitoring in pharmaceutical manufacturing and an innovative method for characterization at the nanoscale. Comprehensive coverage of innovations in surface contamination and cleaning. Written by established experts in the contamination and cleaning field. Each chapter is a comprehensive review of the state of the art. Case studies included.

Physico-chemical Aspects of Textile Coloration Stephen M. Burkinshaw, 2016-02-08 The production of textile materials comprises a very large and complex global industry that utilises a diverse range of fibre types and creates a variety of textile products. As the great majority of such products are coloured predominantly using aqueous dyeing processes, the coloration of textiles is a large scale global business in which complex procedures are used to apply different types of dye to the various types of textile material. The development of such dyeing processes is the result of substantial research activity undertaken over many decades into the physico-chemical aspects of dye adsorption and the establishment of dyeing theory.

which seeks to describe the mechanism by which dyes interact with textile fibres **Physico Chemical Aspects of Textile Coloration** provides a comprehensive treatment of the physical chemistry involved in the dyeing of the major types of natural man made and synthetic fibres with the principal types of dye The book covers fundamental aspects of the physical and chemical structure of both fibres and dyes together with the structure and properties of water in relation to dyeing dyeing as an area of study as well as the terminology employed in dyeing technology and science contemporary views of intermolecular forces and the nature of the interactions that can occur between dyes and fibres at a molecular level fundamental principles involved in dyeing theory as represented by the thermodynamics and kinetics of dye sorption detailed accounts of the mechanism of dyeing that applies to cotton and other cellulosic fibres polyester polyamide wool polyacrylonitrile and silk fibres non aqueous dyeing as represented by the use of air organic solvents and supercritical CO₂ fluid as alternatives to water as application medium The up to date text is supported by a large number of tables figures and illustrations as well as footnotes and widespread use of references to published work The book is essential reading for students teachers researchers and professionals involved in textile coloration
