**High-Speed Dreams** Erik M. Conway, 2005 In *High Speed Dreams* Erik M Conway constructs an insightful history that focuses primarily on the political and commercial factors responsible for the rise and fall of American supersonic transport research programs Conway charts commercial supersonic research efforts through the changing relationships between international and domestic politicians military NASA contractors private investors and environmentalists He documents post World War II efforts at the National Advisory Committee on Aeronautics and the Defense Department to generate supersonic flight technologies the attempts to commercialize these technologies by Britain and the United States during the 1950s and 1960s environmental campaigns against SST technology in the 1970s and subsequent attempts to revitalize supersonic technology at the end of the century *High Speed Dreams* is a sophisticated study of politics economics nationalism and the global pursuit of progress Historians along with participants in current aerospace research programs will gain valuable perspective on the interaction of politics and technology

*Supersonic (Airliner) Non-Sense* Ronald Edward George Davies, 1998-03 Since the dramatic flight by Chuck Yeager in 1947 when an aircraft first exceeded the speed of sound the dream of a successful supersonic airliner has captivated the interest of many manufacturers but their assumptions carry little weight as they are ill supported by known data The conclusions drawn to produce market estimates of more than a thousand aircraft neither clear headed nor objective This book written by an experienced analyst who spent most of his career in commercial airline market research traffic forecasting explodes the myth The analysis draws upon known facts applies simple arithmetic makes assumptions that are based on technical operational commercial sense
