Even current debates on genetics and ecology and the public exhibition of plastinated human bodies invoke these same themes and make this volume a topical contribution to cultural studies today. How do religious ideas become formative of landscape? How can indigenous traditions inform current cultural debates? This book explores ways in which religious perceptions and cultural values affect our understandings of relationships with nature and our actions in and upon the environment. Drawing on sources in literature, sacred texts, intellectual history, oral traditions, rituals and anthropological practices, the authors speak of realities in and across world regions including Africa, India, Japan and the USA. Unwilling to reduce the power of symbolic, mythic and cosmological thought, the authors highlight the shifting, illusive and perplexing aspects of the relationship between cosmology and landscape. Examining the interpenetration of religious, environmental and economic realities, this book includes critically positioned voices of Indigenous people on the
