data reported by WHO's Member States in annual rounds of global TB data collection. In 2012, 182 Member States and a total of 204 countries and territories that collectively have more than 99% of the world's TB cases reported data. Executive summary p 1. **Global Tuberculosis Control**, 2010. **Bulletin of the World Health Organization**. World Health Organization, 2008. **Global Tuberculosis Control**. World Health Organization, 2006. This is the 10th WHO annual report on surveillance, planning and financing for global tuberculosis control, including data on case notifications and treatment outcomes from 200 national TB control programmes and an analysis of plans, budgets, expenditures and progress in DOTS (Directly Observed Therapy Short Course) strategies for 22 high burden countries. Eleven consecutive years of data are now available to assess progress towards the Millennium Development Goals targets for TB control. Findings include that in 2004 there were nine million new cases of TB and an estimated two million deaths from TB, including those co-infected with HIV. The TB incidence rate was stable or falling in five out of six WHO regions, with the number of cases rising in Africa, where the TB epidemic is still driven by the spread of HIV. More than 80 per cent of all TB patients live in sub-Saharan Africa and Asia.

Nigerian Journal of Social Work Education, 2012. Crisis Preparedness. Stella R. Quah, 2007. Throughout history, nations have waged war against epidemics, from bubonic plague to pulmonary tuberculosis. Today we confront HIV/AIDS, SARS and avian influenza among other major infectious diseases. Scientists around the world scrutinize viruses and bacteria more intently than ever. Yet while scientific advances are crucial, they are insufficient. The world is not well prepared for the next health crisis. This timely book argues that the battle against infectious disease epidemics must be fought on two fronts. The first, of course, is the laboratory. The second is the wider social context that involves ordinary individuals and groups, legislators and the state. The failure to contain HIV/AIDS and the emergence of new infectious diseases highlight the inadequacies of current preventive and management approaches to deal with epidemics. The authors of *Crisis Preparedness* offer perspectives from social science, epidemiology and public health, collectively seeking to answer the question: How can we prepare for the next global epidemic? Measuring Effectiveness in Humanitarian and Development Aid. Andre M. N. Renzaho, 2007. Donor countries are currently scaling up their aid programmes in response to strategies proposed through the Millennium Development Goals. Recent positive research on the impact of foreign development aid has led to increased expectations on the part of donor countries. Research suggests that per capita income growth over the last decade would have been lower in the absence of aid, and also that public sector expenditure on health and education in developing countries would not have been as great without aid inflows. However, there still remain many significant gaps in knowledge on aid allocation and effectiveness. This book addresses a number of these gaps and provides many new and important analytical insights into aid. Among the topics covered are the interface between aid allocation and perceptions of aid effectiveness, the inter-recipient concentration of aid from non-government organizations, the year-on-year volatility of aid impacts, aid on public sector fiscal aggregates and evaluation of the country-level impacts of aid. The book is an essential companion for
