

Cladograms for Tetrapoda

provides hypothesized evolutionary among a group of species based on early and derived characters.

CHARTER

As a cluster is a group of components, which often don't share the same characteristics, observed clusters are a common approximation. In other words, some clusters include more than one feature of a mechanism and other mechanisms without any feature from this cluster. This approach is called cross-domain clustering. In this case, each cluster contains small clusters, which are called sub-clusters, and sub-clusters, small blocks.

The diagram illustrates the evolution of amniotes from a common ancestor. The amniotic egg is shown at the bottom, with the embryo protected by amniotic fluid. Above the egg, the first amniote is depicted with a skull, a notochord, and a neural tube. The diagram then branches into five main groups:

- 1. Amniotes:** Represented by a lizard and a bird.
- 2. Archosaurs:** Represented by a crocodile and a bird.
- 3. Reptiles:** Represented by a lizard and a snake.
- 4. Synapsids:** Represented by a lizard and a snake.
- 5. Mammals:** Represented by a rabbit and a mouse.

Annotations on the right side of the diagram provide specific details about certain groups:

- FEATHERS AND TOOTHLESS BEARS:** Refers to birds.
- SKULL OPENINGS IN FRONT OF THE EYE AND IN THE JAW:** Refers to archosaurs.
- OPENINGS IN THE SIDE OF THE SKULL:** Refers to synapsids.
- SKULL OPENINGS BEHIND THE EYES:** Refers to mammals.
- EMBRYO PROTECTED BY AMNIOTIC FLUID:** Refers to the amniotic egg at the bottom.

In a cladogram, a node is the intersection of two branches. This node represents the most recent common ancestor shared by the entire tetrapoda clade.

DERIVED CHARACTER

Organisms that benefit a cell

Organisms that branch off after a hash mark share the derived character represented by the hash mark. An embryo protected by amniotic fluid is a derived character shared by all organisms in the amniota clade. Amphibians do not have this derived character.

Which groups of animals belong to the amniota clade? Which belong to the archosauvia clade?
