*The Mathematical Theory of Coding* Ian F. Blake, Ronald C. Mullin, 2014-05-10 The Mathematical Theory of Coding focuses on the application of algebraic and combinatoric methods to the coding theory including linear transformations vector spaces and combinatorics The publication first offers information on finite fields and coding theory and combinatorial constructions and coding Discussions focus on self dual and quasicyclic codes quadratic residues and codes balanced incomplete block designs and codes bounds on code dictionaries code invariance under permutation groups and linear transformations of vector spaces over finite fields The text then takes a look at coding and combinatorics and the structure of semisimple rings Topics include structure of cyclic codes and semisimple rings group algebra and group characters rings ideals and the minimum condition chains and chain groups dual chain groups and matroids graphs and coding The book ponders on group representations and group codes for the Gaussian channel including distance properties of group codes initial vector problem modules group algebras and representations orthogonality relationships and properties of group characters and representation of groups The manuscript is a valuable source of data for mathematicians and researchers interested in the mathematical theory of coding

**Completely Regular Codes in Distance Regular Graphs** Minjia Shi, Patrick Solé, 2025-03-14 The concept of completely regular codes was introduced by Delsarte in his celebrated 1973 thesis which created the field of Algebraic Combinatorics This notion was extended by several authors from classical codes over finite fields to codes in distance regular graphs Half a century later there was no book dedicated uniquely to this notion Most of Delsarte examples were in the Hamming and Johnson graphs In recent years many examples were constructed in other distance regular graphs including  $q$  analogues of the previous and the Doob graph Completely Regular Codes in Distance Regular Graphs provides for the first time a definitive source for the main theoretical notions underpinning this fascinating area of study It also supplies several useful surveys of constructions using coding theory design theory and finite geometry in the various families of distance regular graphs of large diameters Features Written by pioneering experts in the domain Suitable as a research reference at the master's level Includes extensive tables of completely regular codes in the Hamming graph Features a collection of up to date surveys
