The Mathematics of Inheritance Systems David S. Touretzky, 1986 The Frame Problem in Artificial Intelligence Frank M. Brown, 2014-05-12 The Frame Problem in Artificial Intelligence Proceedings of the 1987 Workshop focuses on the approaches principles and concepts related to the frame problem in artificial intelligence AI The selection first tackles the definition of the frame problem circumscription approaches and criticisms modal logic approaches and syntactic consistency approaches The text then takes a look at two frame problems frame problem in AI and the frame problem in AI histories including frame problem defined mathematical frame problem commonsense frame problem and the problems of qualification and extended prediction and their relation to the frame problem The publication examines tense logic based mitigation of the frame problem unframing the frame problem a truth maintenance based approach to the frame problem and qualification problem Topics include possible worlds qualification and possible worlds epistemological issues truth maintenance contradiction handling application of intensional logic development and implementation of chronolog and approaches to solving the frame problem The selection is a dependable source of data for researchers interested in the frame problem Scandinavian Conference on Artificial Intelligence--91 Brian Mayoh, 1991 Qualitative and Quantitative Practical Reasoning Dov Gabbay, 1997-05-28 This book constitutes the refereed proceedings of the First International Joint Conference on Qualitative and Quantitative Practical Reasoning ECSQARU FAPR 97 held in Bad Honnef Germany in June 1997 The volume presents 33 revised full papers carefully selected for inclusion in the book by the program committee as well as 12 invited contributions Among the various aspects of human practical reasoning addressed in the papers are nonmonotonic logics default reasoning modal logics belief function theory Bayesian networks fuzzy logic possibility theory inference algorithms dynamic reasoning with partial models and user modeling approaches **Knowledge Representation, Reasoning, and the Design of Intelligent Agents** Michael Gelfond, Yulia Kahl, 2014-03-10 Knowledge representation and reasoning is the foundation of artificial intelligence declarative programming and the design of knowledge intensive software systems capable of performing intelligent tasks Using logical and probabilistic formalisms based on answer set programming ASP and action languages this book shows how knowledge intensive systems can be given knowledge about the world and how it can be used to solve non trivial computational problems The authors maintain a balance between mathematical analysis and practical design of intelligent agents All the concepts such as answering queries planning diagnostics and probabilistic reasoning are illustrated by programs of ASP The text can be used for AI related undergraduate and graduate classes and by researchers who would like to learn more about ASP and knowledge representation **Higher Education and New Technologies** H. Oosthoek, 2013-10-22 This volume contains the proceedings of the 5th Congress of the European Association for Research and Development in Higher Education EARDHE and the Dutch Association for Research and Development in Higher Education CRWO The focus of the Congress was the

application of new technology both in the fields of teaching learning and in management organization and administration Though teaching and learning are the core fields of interest this work reflects the growing importance of R D in university management planning and organization Three main themes are discussed the influence and consequences of new technologies for learning and instruction the influence and consequences for management and institutional structures and the possibilities of new technologies in developing countries

Computers and Languages A. Nijholt, 2014-06-28 A global introduction to language technology and the areas of computer science where language technology plays a role Surveyed in this volume are issues related to the parsing problem in the fields of natural languages programming languages and formal languages Throughout the book attention is paid to the social forces which influenced the development of the various topics Also illustrated are the development of the theory of language analysis its role in compiler construction and its role in computer applications with a natural language interface between men and machine Parts of the material in this book have been used in courses on computational linguistics computers and society and formal approaches to languages

Knowledge Representation and the Semantics of Natural Language Hermann Helbig, 2005-12-19 Natural Language is not only the most important means of communication between human beings it is also used over historical periods for the preservation of cultural achievements and their transmission from one generation to the other During the last few decades the flood of digitalized information has been growing tremendously This tendency will continue with the globalization of information societies and with the growing importance of national and international computer networks This is one reason why the theoretical understanding and the automated treatment of communication processes based on natural language have such a decisive social and economic impact In this context the semantic representation of knowledge originally formulated in natural language plays a central part because it connects all components of natural language processing systems be they the automatic understanding of natural language analysis the rational reasoning over knowledge bases or the generation of natural language expressions from formal representations This book presents a method for the semantic representation of natural language expressions texts sentences phrases etc which can be used as a universal knowledge representation paradigm in the human sciences like linguistics cognitive psychology or philosophy of language as well as in computational linguistics and in artificial intelligence It is also an attempt to close the gap between these disciplines which to a large extent are still working separately

Artificial Intelligence, Expert Systems, and Symbolic Computing Elias N. Houstis, John Rischard Rice, 1992 This volume contains papers in the areas of artificial intelligence expert systems symbolic computing and applications to scientific computing Together they provide an excellent overview of the dynamic state of these closely related fields They reveal a future where scientific computation will increasingly involve symbolic and artificial intelligence tools as these software systems become more sophisticated also a future where systems of computational science and engineering will be problem solving environments created with components from numerical analysis computational
