Brick and Marble in the Middle Ages George Edmund Street (architect), 1874 **Army Logistician**, 2007 The official magazine of United States Army logistics **The American House Carpenter** Robert Griffith Hatfield, 1880 Symmetry as a Developmental Principle in Nature and Art Werner Hahn, 1998 Looking beyond the boundaries of various disciplines, the author demonstrates that symmetry is a fascinating phenomenon which provides endless stimulation and challenges. He explains that it is possible to readapt art to the sciences and vice versa by means of an evolutionary concept of symmetry. Many pictorial examples are included to enable the reader to fully understand the issues discussed. Based on the artistic evidence that the author has collected, he proposes that the new *ars evolutoria* can function as an example for the sciences. The book is divided into three distinct parts, each one focusing on a special issue. In Part I, the phenomenon of symmetry, including its discovery and meaning, is reviewed. The author looks closely at how Vitruvius, Polyclitus, Democritus, Plato, Aristotle, Plotinus, Augustine, Alberti, Leonardo da Vinci, and Dürer viewed symmetry. This is followed by an explanation on how the concept of symmetry developed. The author further discusses symmetry as it appears in art and science as well as in the modern age. Later, he expounds the view of symmetry as an evolutionary concept which can lead to a new unity of science. In Part II, he covers the points of contact between the form-developing process in nature and art. He deals with biological questions in particular evolution. The collection of new and precise data on perception and knowledge with regard to the postulated reality of symmetry leads to further development of the evolutionary theory of symmetry. In Part III, the author traces the enormous treasure of observations made in nature and culture back to a few underlying structural principles. He demonstrates symmetry as a far-reaching leading structuring causal element of evolution, as the idea lying behind nature and culture. Numerous controllable, reproducible double-mirror experiments on a new stereoscopic vision verify a symmetrization theory of perception. *Italy: Handbook for Travellers: Central Italy and Rome* Karl Baedeker (Firm), 1886 *The Thanage of Fermartyn Including the District Commonly Called Formartine* William Temple, 1894 **The Archaeological Journal**, 1871 **The Builder**, 1875 **The Novels of Balzac** Honoré de Balzac, 1900 *Paris and Its Environs* Findlay Muirhead, Marcel Monmarché, 1927 *Journals of the House of Lords* Great Britain.
