Smale, 2018-11-29 Did you know that more than 85% of U S undergraduates commute to college Yet the literature geared to academic libraries overwhelmingly presumes a classic residential campus This book redresses that imbalance by providing a research based look at the specific academic needs of commuter students Edited by a team of librarians and anthropologists with City University of New York the largest urban public university in the U S it draws on their ongoing research examining how these students actually interact with and use the library The insights they've gained about how library resources and services are central to commuter students academic work offer valuable lessons for other institutions Presenting several additional case studies from a range of institution types and sizes in both urban and suburban settings this book provides rigorous analysis alongside descriptions of subsequent changes in services resources and facilities Topics include why IUPUI interior designers decided to scrap plans to remove public workstations to make way for collaborative space how ongoing studies by University of North Carolina anthropologist Donna Lanclos shaped the design of the Family Friendly Library Room where students may bring their children ways that free scanners and tablet lending at Brooklyn College supports subway students ideas from students on how best to help them through the use of textbook collections using ACRL's Assessment in Action model to learn about student engagement and outcomes with library instruction at a community college and guidance on enlisting the help of anthropology students to conduct interviews and observations in an ethnographic study With its emphasis on qualitative research this book will help readers learn what commuter students really need from academic libraries *Federal Register*, 1995-12 *Progress in Spatial Analysis* Antonio Páez, Julie Gallo, Ron N. Buliung, Sandy Dall'erba, 2009-10-30 Space is increasingly recognized as a legitimate factor that influences many processes and conceptual frameworks including notions of spatial coherence and spatial heterogeneity that have been demonstrated to provide substance to both theory and explanation The potential and relevance of spatial analysis is increasingly understood by an expanding sphere of cogent disciplines that have adopted the

tools of spatial analysis This book brings together major new developments in spatial analysis techniques including spatial statistics econometrics and spatial visualization and applications to fields such as regional studies transportation and land use political and economic geography population and health Establishing connections to existing and emerging lines of research the book also serves as a survey of the field of spatial analysis and its links with related areas Dynamic Decision and Adjustment Processes in Commuter Behavior Under Real-time Information Karthik K. Mahmassani, 2002 Advanced Traveler Information Systems ATIS by providing real time traffic information can assist trip makers in selecting efficient travel choices and aid the attainment of desirable system goals including reduced costs and increased efficiencies The success of ATIS in achieving such goals critically depends on user behavior in response to information This research focuses on investigating dynamic aspects in commuter behavior under real time information A dynamic interactive travel behavior simulator that enables a consistent representation of the nonlinear time dependent interactions between network performance trip makers choices and information is used to observe trip maker behavior Using the simulator interactive experiments are conducted where a range of experimental factors including network loading day to day traffic evolution and ATIS information strategies are varied and the consequent trip maker behavior is observed Constituent models are proposed to analyze the choice dimensions of route departure time and compliance The dynamic kernel logit DKL formulation is presented for analyzing these data and its theoretical and computational suitability established The results confirm the significance of compliance and inertia as key mechanisms influencing route choice Departure time adjustments appear to be based on a sequential heuristic search Calibrated models also provide evidence of learning adjustment perception judgment and updating processes in trip maker behavior Empirical results indicate that real time information and time dependent network conditions are strong determinants of trip maker behavior in a commuting context The nature and quality of ATIS information accuracy and reliability the magnitude of network loading and its day to day evolution and users past traffic experience are important influences on how commuters select routes and departure times At the unobserved level general dynamic and stochastic patterns including heterogeneity state dependence habit persistence and correlations are present in trip makers decisions These substantive results have important implications for network state prediction travel demand forecasting design and evaluation of ATIS services and deployment of Intelligent Transportation System ITS programs User behavior models developed here can be integrated with dynamic network traffic assignment models to obtain more accurate system performance modeling capabilities with considerable applications in tactical and strategic system planning and traffic operations **Comparison, Contrast, and Critique of Four Commuter Coordination Systems** Newton Margulies, 1990 Examines the operations of commuter coordination organizations located in San Diego Sacramento Orange County and the Los Angeles area The Country Gentleman, 1913 **Time** Briton Hadden, Henry R.
