Slope Tectonics Michel Jaboyedoff,2011 Usually geomorphology structural geology and
engineering geology provide descriptions of slope instability in quite distinctive ways This new research is based on
combined approaches to providing an integrated view of the operative slope processes Slope Tectonics is the term adopted
here to refer to those deformations that are induced or fully controlled by the slope morphology and that generate features
which can be compared to those created by tectonic activity Such deformation can be induced by the stress field in a slope
which is mainly controlled by gravity topography and the geological setting created by the geodynamic context The content
of this book includes slope deformation characterization using morphology and evolution mechanical behaviour of the
material modes of failure and collapse influence of lithology and structural features and the role played by controlling factors
The contributions cover broad aspects of slope tectonics that attempt to underline a multidisciplinary approach which should
create a better framework for studies of slope instability
