**Riches of the Rain Forest** Wendy Veevers-Carter, 1984      *The Samoan Rainforest* W. Arthur Whistler, 2002 The Samoan archipelago is divided politically into a western portion known as Samoa formerly known as Western Samoa and an eastern portion known as American Samoa These volcanic islands in the heart of Polynesia were once almost entirely covered with a mantle of tropical rainforest but after over 3000 years of human occupation much of the native vegetation has been removed and that which remains is gravely threatened by a growing population an unrelenting timber industry and recurring

hurricanes The Samoan Rainforest is a study of the plant cover of these islands based on the author's work in Samoa that spans three decades Based upon structure and species present the vegetation of the archipelago is divided into several plant communities such as littoral strand marshes mangroves freshwater swamps lowland rainforest montane rainforest cloud forest summit scrub montane scrub volcanic scrub and several types of disturbed vegetation which are discussed in detail in the text and richly illustrated with 130 color photos In addition to the discussion of the plant communities present there is an introductory chapter on the flora botanical history and classification of Samoa plants one on characteristics of tropical rainforests and a concluding chapter on the past present and future of the native vegetation The book is aimed at high school and college students teachers and researchers who are doing or wish to do work in Samoan forests Rain Forest Activity Book Charlene Stout,1998 **Lessons of the Rainforest** Suzanne Head,Robert Heinzman,1990 Essays from 24 leading authorities committed to finding alternatives to rain forest decimation *The Rainforest Supply Price* H. Jack Ruitenbeek,1990 *Mapping the World's Vegetation* David J. De Laubenfels,1975 Vegetation the plant content of an area is a fundamental component of the natural environment on the land surface of the earth It converts energy into food and is therefore at the base of the food chain making vegetation a key link in natural ecosystems integrating climate soil and living organisms By identifying and analyzing distinct frontiers both in vegetation formation and in world flora this book confirms that a set of formation types and distinctive floristic realms exist This makes possible for the first time rigorous definitions for formation types and for specific floristic realms More important than the clarification of boundaries is the examination of causative factors which is facilitated by the demonstration of distinct categories Thus probable causes for the origin of distinct vegetation formation types and floristic realms are offered in this book Such a fresh examination of the regionalization of vegetation of the world scale helps to put world vegetation mapping on a more satisfactory scientific basis a goal of major significance to geographers Environmentalists and ecologists will be especially interested in the research finding that the same vegetation structure recurs again and again among unrelated assemblages of plants in remote parts of the world verifying the fact that vegetation formations are distinct kinds of ecological systems **A Manual of Forestry: Forest utilization** Sir William Schlich,1896 *The Rainforest Harvest* Friends of the Earth,1992 **World Guide to Environmental Issues and Organizations** Peter Brackley,1990 *The Head-hunters of Borneo* Bock,1882 The Journal of the Siam Society ,1939
