**Steering Business Toward Sustainability** Fritjof Capra,1995 Sustainability in its ecological and social components poses businesses an inescapable challenge without sustainability there will be an end to profits Hence business people have a strong self interest in minimizing the ecological damage of their operations In this book business executives economists ecologists and other thinkers outline new practical approaches that businesses and society must take to meet this challenge

Environmental Taxes Kalle Määttä,2006 Environmental taxes differ from each other according to the functions they serve and the manner in which they are implemented This study highlights the appropriateness of different kinds of environmental taxes against a rigorous framework of theory and case study evidence The purpose of this book is to analyse the way in which environmental taxes are categorized and which factors affect the effectiveness and efficiency of the different kinds of environmental taxes in practice This pragmatic approach is emphasized along with the multiplicity of regulatory problems such as At what level should the environmental tax rate be set What is the proper time schedule for introducing an environmental tax What are the most appropriate taxable characteristics and how should they be determined What activities

should be exempt from environmental taxation How can tax relief be implemented These are only some of the regulatory problems explored in this study which also encompasses an examination of the theory of regulation The author argues that economists have often paid too little attention to the administrative and legal issues concerning the implementation of legislation such as environmental tax laws which are of course vital to the success of any potential policy Lawyers too have in turn neglected the theory of regulation which would assist in analysing problems in a future oriented way Environmental Taxes will therefore be of great interest to a wide audience of environmental economists law and economics scholars as well as policymakers

**Sustainability and the Social Sciences** Egon Becker, Thomas Jahn, 1999-10 Exploring how the concept of sustainability might be applied in each of the social sciences this book argues that environmental questions will increasingly dominate humanity in the course of the 21st century This holds out the opportunity and practical necessity to stimulate new lines of theoretical development within the social sciences and new forms of intellectual cooperation across them

*Macro-environmental Policy* G. Hupperts, 1993 The central theme of this book is how macro environmental policy can be developed which does not prescribe or suggest specific technologies and products but realises the environmental quality desired by changing the general context and the normative principles for policy design and evaluation the first two parts form the analytic core The framework for analysis gives a classification of instruments in terms of permutations of a limited number of defining elements The normative principles guide choices in instrument design and as the flexible response strategy guide their application in specific policies Detailing two main new instruments the standard method for LCA and the substance deposit and applying the instrument strategy as developed to the cases make up the next two parts Social scientists and policy scientists might concentrate on the framework while those engaged in the theory of policy development and policy analysis including strategic analysis might find items of prime interest in the part on principles Those interested in specific environmental problems may find particular value in the extensive case studies
