Recent Investigations of Ergot Alkaloids Incorporated into Plant and/or Animal Systems Darrin Smith, James Levi Klotz, 2015-07-01 Ergot alkaloids produced by fungi have a basic chemical structure but different chemical moieties at substituent sites result in various forms of alkaloids that are distinguishable from one another Since the ergoline ring structure found in ergot alkaloids is similar to that of biogenic amines neurotransmitters a variety of physiological effects can result after ingestion Research involving ergot alkaloids is an increasing important global issue as more governments pass laws that limit permissible levels of ergot alkaloids in both foodstuffs and feedstuffs Regardless of whether these compounds are found directly in foodstuffs or in feed plants given to forage animals i e cattle horses sheep and goats introduction of these compounds can complicate the food supply In addition toxicosis resulting from alkaloids can be a costly hindrance with mounting annual production losses associated with forage animal production systems that impact other agricultural and food based industries Recent advances for the analysis of these compounds in different matrices as well as the understanding the role these compounds play in distinct biological pathways have begun to help address the issue This Research Topic Recent Investigations of Ergot Alkaloids Incorporated into Plant and or Animal Systems has developed a

novel platform where different groups share recent data in their investigations with ergot alkaloids The presented collection of articles emphasizes the complexity of this issue and the multiple approaches necessary to resolve the global ergot alkaloid challenges

Antimicrobial Peptides and Complement - Maximising the Inflammatory Response Cordula M. Stover,2015-12-18 Antimicrobial peptides and complement are distinct components of the innate immune defence While antimicrobial peptides after cleavage of a

preproprotein have the ability to insert directly in non host membranes complement requires a sequential enzymatic activation in the fluid phase in order to produce a transmembrane membrane attack complex Its insertion is controlled by membrane bound regulators Deficiencies are described for both effectors and relate to increased susceptibility of infection In addition however antimicrobial peptides and complement each influence the activity of inflammatory cells as recent data in the respective research areas shows This series of articles draws together for the entities of antimicrobial peptides and complement a balance of contributions in the areas of evolution roles functions and preclinical applications By comparing and contrasting antimicrobial peptides and complement greater cross disciplinary appreciation will be derived for their individual and overlapping spectra of activity circumstances of activation and their general ability to more completely inform the inflammatory and cellular response **Pacific Rural Press** ,1882 Readers' Guide to Periodical Literature ,1915

Reviewing Chemistry Peter E. Demmin, 1989 *Intra- and inter-species interactions in microbial communities* Luis Raul Comolli, Birgit Luef, Manfred Auer, 2015-03-03 Recent developments in various OMICs fields have revolutionized our understanding of the vast diversity and ubiquity of microbes in the biosphere However most of the current paradigms of microbial cell biology and our view of how microbes live and what they are capable of are derived from in vitro experiments on isolated strains Even the co culturing of mixed species to interrogate community behavior is relatively new But the majority of microorganisms lives in complex communities in natural environments under varying conditions and often cannot be cultivated Unless we obtain a detailed understanding of the near native 3D ultrastructure of individual community members the 3D spatial community organization their metabolic interdependences coordinated gene expression and the spatial organization of their macromolecular machines inventories as well as their communication strategies we won t be able to truly understand microbial community life How spatial and also temporal organization in cell cell interactions are achieved remains largely elusive For example a key question in microbial ecology is what mechanisms microbes employ to respond when faced with prey competitors or predators and changes in external factors Specifically to what degree do bacterial cells in biofilms act individually or with coordinated responses What are the spatial extent and coherence of coordinated responses In addition networks linking organisms across a dynamic range of physical constraints and connections should provide the basis for linked evolutionary changes under pressure from a changing environment Therefore we need to investigate microbial responses to altered or adverse environmental conditions including phages predators and

competitors and their macromolecular metabolic responses according to their spatial organization We envision a diverse set of tools including optical spectroscopical chemical and ultrastructural imaging techniques that will be utilized to address questions regarding e g intra and inter organism interactions linked to ultrastructure and correlated adaptive responses in gene expression physiological and metabolic states as a consequence of the alterations of their environment Clearly strategies for co evolution and in general the display of adaptive strategies of a microbial network as a response to the altered environment are of high interest While a special focus will be placed on terrestrial sole species or mixed biofilms we are also interested in aquatic systems biofilms in general and microbes living in symbiosis In this Research Topic we wish to summarize and review results investigating interactions and possibly networks between microbes of the same or different species their co occurrence as well as spatiotemporal patterns of distribution Our goal is to include a broad spectrum of experimental and theoretical contributions from research and review articles to hypothesis and theory aiming at understanding microbial interactions at a systems level , *Quarterly Journal of the Chemical Society of London* Chemical Society (Great Britain),1969 **Energy Research Abstracts** ,1992 Semiannual with semiannual and annual indexes References to all scientific and technical literature coming from DOE its laboratories energy centers and contractors Includes all works deriving from DOE other related government sponsored information and foreign nonnuclear information Arranged under 39 categories e g Biomedical sciences basic studies Biomedical sciences applied studies Health and safety and Fusion energy Entry gives bibliographical information and abstract Corporate author subject report number indexes
