

HIV and AIDS

Human Immunodeficiency Virus

How is HIV transmitted?

HIV is transmitted through certain **body fluids**: **blood**, **semen**, **vaginal fluids** and **breast milk**. This can happen during unprotected **sex**, if drug users share **needles** and when a HIV-positive mother **breast-feeds** her baby (unless she is taking ART - see the next page).

Acquired Immune Deficiency Syndrome

What does HIV do?

HIV enters the **blood** and begins to **attack** helper T-cells. It enters the cell and forces it to make **new** HIV particles. It **destroys** the helper T-cell when the new viruses **burst** out of the cell. Helper T-cells are a type of **white** blood cell that are very important in the **immune** response.

Around 2-4 weeks after the initial infection, flu-like **symptoms** start to appear. These include a high **temperature**, sore throat, body rash and other symptoms. This happens because the **immune** system is trying to **destroy** HIV in the body.

HIV and AIDS in Schools Barrie Craven, 2001-11-20 HIV and Aids teaching is compulsory in British schools but the content is not prescribed Should teaching in such a difficult field where there are disputes among experts be left to secondary school teachers with no specialist knowledge And is it right that the subject should be compulsory These awkward

issues are confronted in this controversial paper which examines the materials being used by schools in HIV Aids teaching and how teachers are approaching the subject The authors conclude that because of material provided by pressure groups teachers are exaggerating the Aids problem and failing to stress the extent to which the risk of infection depends on behaviour Rent seeking by vested interests results in a serious distortion of the views presented to children Their conclusion about Britain is that HIV Aids teaching should no longer be compulsory Either the law should be repealed or schools should simply drop the subject
