Coastal Landscapes of the Mesolithic Almut Schülke, 2020-03-06 Coastal Landscapes of the Mesolithic Human Engagement with the Coast from the Atlantic to the Baltic Sea explores the character and significance of coastal landscapes in the Mesolithic on different scales and with various theoretical perspectives and methodological approaches Mesolithic people were strongly connected to the sea with coastal areas vital for subsistence and communication across the water This anthology includes case studies from Scandinavia western Europe and the Baltic area presented by key international researchers Topics addressed include large scale analyses of the archaeological and geological development of coastal areas the exploration of coastal environments with interdisciplinary methods the discussion of the character of coastal settlements and of their possible networks social and economic practices along the coast as well as perceptions and cosmological aspects of coastal areas Together these topics and approaches contribute in an innovative way to the understanding of the complexity of topographically changing coastal areas as both border zones between land and sea and as connecting landscapes Providing novel insights into the study of the Mesolithic as well as coastal areas and landscapes in general the book is an important resource for researchers of the Mesolithic and coastal archaeology

review on different methods to mitigate beach loss caused by storms or persistent long term erosion He then describes in detail the method of beach nourishment which is also called a beach fill This paper discusses the information that must be collected to design a beach fill and that should be monitored after the completion of the project The last paper of this volume shifts our attention to the design of offshore structures such as gravity structures floating barges and tankers Chakrabarti discusses the effects of the uniform and shear currents on fixed and floating structures     **Fishery Market News** ,1988
