

### What is a time series?

- A time series is any series of data that varies over time. For example.
  - Monthly Tourist Arrivals from Europe
  - Quarterly GDP of Ethiopia
  - Monthly price of basic commodities
  - Weekly quantity of coffee sold at ECX.
- Because of widespread availability of time series databases most empirical studies use time series data.

**Econometrics Reading Lists** Edward Tower,1985 *Asymptotically Median Unbiased Estimation of Coefficient Variance in a Time Varying Parameter Model* James H. Stock,Mark W. Watson,1996 This paper considers the estimation of the variance of coefficients in time varying parameter models with stationary regressors The maximum likelihood estimator has large point mass at zero We therefore develop asymptotically median unbiased estimators and confidence intervals by inverting median functions of regression based parameter stability test statistics computed under the constant parameter null These estimators have good asymptotic relative efficiencies for small to moderate amounts of parameter variability We apply these results to an unobserved components model of trend growth in postwar U S GDP the MLE implies that there has been no change in the trend rate while the upper range of the median unbiased point estimates

imply that the annual trend growth rate has fallen by 0.7 percentage points over the postwar period

**Evidence on Structural Instability in Macroeconomic Time Series Relations** James H. Stock, Mark W. Watson, 1994 An experiment is performed to assess the prevalence of instability in univariate and bivariate macroeconomic time series relations and to ascertain whether various adaptive forecasting techniques successfully handle any such instability. Formal tests for instability and out-of-sample forecasts from sixteen different models are computed using a sample of 76 representative U.S. monthly postwar macroeconomic time series constituting 5700 bivariate forecasting relations. The tests indicate widespread instability in univariate and bivariate autoregressive models. However, adaptive forecasting models in particular time-varying parameter models have limited success in exploiting this instability to improve upon fixed parameter or recursive autoregressive forecasts
