## **Synthesizing Synchronous Systems By Static Scheduling In Space Time:**

**Synthesizing Synchronous Systems by Static Scheduling in Space-Time** Björn Lisper, 1989-05-10 The subject of this book is the synthesis of synchronous hardware. The purpose is to provide a firm mathematical foundation for the so called space time mapping methods for hardware synthesis that have been proposed during the last few years. Thus the treatment is fairly mathematical. In a space time mapping method an algorithm is described as a set of atomic events with possible data dependencies between them. The task is to find a mapping assigning a space time coordinate to each event so that causality is not violated and the solution is good. Previous work in the area if it provided any formalism at all has relied mainly on uniform recurrence equations extensions thereof or on purely graph theoretic formulations. In this project algebra is used instead and the close connection with single assignment languages is stressed. Thus it is possible to generalize previous work and to give simple characterizations of the type of algorithms that can be implemented with space time mappings. The results presented can be applied to hardware construction and compiler techniques for parallel computers

**Verification of Concurrent Systems** Charles Rattray, 2013-11-11 This volume contains papers presented at the BCS FACS Workshop on Specification and Verification of Concurrent Systems held on 6-8 July 1988 at the University of Stirling, Scotland. Specification and verification techniques are playing an increasingly important role in the design and production of practical concurrent systems. The wider application of these techniques serves to identify difficult problems that require new approaches to their solution and further developments in specification and verification. The Workshop aimed to capture this interplay by providing a forum for the exchange of the experience of academic and industrial experts in the field.

Presentations included surveys, original research, practical experience with methods, tools and environments in the following or related areas: Object oriented process data and logic based models and specification methods for concurrent systems.

Verification of concurrent systems. Tools and environments for the analysis of concurrent systems. Applications of specification languages to practical concurrent system design and development. We should like to thank the invited speakers and all the authors of the papers whose work contributed to making the Workshop such a success. We were particularly pleased with the international response to our call for papers. Invited Speakers: Pierre America, Philips Research Laboratories, University of Warwick; Professor M. Joseph David Freestone, British Telecom Organising Committee: Charles Rattray, Dr. Muffy Thomas, Dr. Simon Jones, Dr. John Cooke, Professor Ken Turner, Derek Coleman, Maurice Naftalin, Dr. Peter Scharbach. vi Preface: We would like to acknowledge the financial contribution made by SD Systems Designers pie, Camberley, Surrey.

**Stepwise Refinement of Distributed Systems** Jaco W. de Bakker, Willem-Paul de Roever, Grzegorz Rozenberg, 1990-04-25 The stepwise refinement method postulates a system construction route that starts with a high level specification, goes through a number of provably correct development steps and ends with an executable program. The contributions to this volume survey the

state of the art in this extremely active research area. The world's leading specialists in concurrent program specification verification and the theory of their refinement present latest research results and surveys of the fields. State based algebraic temporal logic oriented and category theory oriented approaches are presented. Special attention is paid to the relationship between compositionality and refinement for distributed programs. Surveys are given of results on refinement in partial order based approaches to concurrency. A unified treatment is given of the assumption commitment paradigm in compositional concurrent program specification and verification and the extension of these to liveness properties. Latest results are presented on specifying and proving concurrent data bases correct and deriving network protocols from their specifications.

**Progress in Distributed Operating Systems and Distributed Systems Management** Wolfgang Schröder-Preikschat, 1990-05-22. The purpose of this workshop was to provide a general forum for distributed systems researchers. Special emphasis was placed on research activities in distributed operating systems and management of distributed systems. This volume includes a selection of the papers presented at the workshop. They focus on the illustration of existing concepts and solutions in distributed systems research and development exemplified by case study analyses of various projects. The annex contains the position papers prepared for the panel discussions at the workshop.

Design and Implementation of Symbolic Computation Systems Alfonso Miola, 1990-03-26. The growing importance of the systems for symbolic computation has greatly influenced the decision of organizing DISCO 90 which is short for International Symposium on Design and Implementation of Symbolic Computation Systems. DISCO 90 focuses mainly on the most innovative methodological and technological aspects of hardware and software system design and implementation for Symbolic and Algebraic Computation, Automated Reasoning, Software Environments, Languages and User Interfaces and Automatic Programming. In particular it includes papers on the design and the development of significant running systems. The general objective of DISCO 90 is to present an up to date view of the field while encouraging the scientific exchange among academic, industrial and user communities of the development of systems for symbolic computation.

*Computer Aided Systems Theory - EUROCAST '89* Franz Pichler, Roberto Moreno-Diaz, 1990-02-07. Nonlinear Evolution Equations and Dynamical Systems. NEEDS provides a presentation of the state of the art. Except for a few review papers the 40 contributions are intentionally brief to give only the gist of the methods, proofs, etc. including references to the relevant literature. This gives a handy overview of current research activities. Hence the book should be equally useful to the senior researcher as well as the colleague just entering the field. Keypoints treated are i) integrable systems in multidimensions and associated phenomenology, dromions, ii) criteria and tests of integrability, e.g. Painlevé test, iii) new developments related to the

scattering transform iv algebraic approaches to integrable systems and Hamiltonian theory e g connections with Young Baxter equations and Kac Moody algebras v new developments in mappings and cellular automata vi applications to general relativity condensed matter physics and oceanography    *Computer Vision - ECCV 90* Olivier Faugeras,1990-04-04
