Synthetic Fibre Materials:

Synthetic Fibre Materials H. Brody, 1994 Discusses the science behind the many applications of synthetic fiber material postulating mechanisms and models of why they work as they do and the physics and chemistry of their performance. An introduction reviews the background science such as thermal and mechanical properties, textile properties and dyeability. Among the other topics are clothing, carpets, non-wovens, rubber composites, high performance fibers, thermostable and fire resistant fibers, and specialized uses in engineering, medicine, cement reinforcement and monofil. Intended to be a standard reference for all levels of people involved with synthetic fibers. Annotation copyright by Book News Inc Portland OR

Synthetic Fibres J E McIntyre, 2004-10-29 Synthetic fibres account for about half of all fibre usage with applications in every field of fibre and textile technology. Although many classes of fibre based on synthetic polymers have been evaluated as potentially valuable commercial products, four of them, nylon, polyester, acrylic and polyolefin, dominate the market. These four account for approximately 98% by volume of synthetic fibre production, with polyester alone accounting for around 60%.

Synthetic fibres: nylon, polyester, acrylic, polyolefin provides a brief history of the early evaluations that led to this situation, then looks in detail at the development and present status of each class in four substantial chapters. Synthesis of chemical intermediates, polymerisation methods, fibre spinning and orientation technology, texturing techniques, production of microfibres and chemical variants e.g. for modified dyeability are considered in detail. This comprehensive and accessible book will appeal to textile technologists in industrial and academic research, chemical and synthetic fibre suppliers and yarn and fabric manufacturers. Comprehensive overview of four major fibres

Aslam, Chandrabhan Verma, 2023-03-20 Advanced fiber materials have been developed for various superior applications because of their higher mechanical flexibility, high temperature resistance and outstanding chemical stability. This book presents an overview of the current development of advanced fiber materials, fabrication methods and applications. Applications covered include pollution control, environment, energy, information storage, technology, optical and photonic photocatalysis, textile, drug delivery, tumor therapy, corrosion protection, applications and a state of art of advanced fiber materials

Chemistry of Textile Fibres Robert R Mather, Roger H Wardman, Sohel Rana, 2023-09-25 Ever wondered why a particular type of fibre is used for a certain application? Readers of this book will gain an appreciation of the answer to this question and more through understanding the chemistry behind the properties of the fibres. Providing a comprehensive overview of the various types of textile fibres that are available today, ranging from natural fibres to high performance fibres that are very technologically advanced, the book is a revised and updated new edition of a highly successful text. Textiles are ubiquitous materials that many of us take for granted in our everyday lives. We rely on our clothes to protect us from the environment and use them to enhance our appearance. Textiles also find applications in transport, healthcare, construction

and many other industries The third edition of The Chemistry of Textile Fibres updates a significant amount of the information provided in the previous editions such as the synthesis from renewable resources of monomers for producing synthetic fibres emerging applications of nanofibres production of electrically conducting fibres incorporating graphene and carbon nanotubes and nano finishing of textiles It also gives greater emphasis to those aspects of textile chemistry that combat adverse environmental impact including the chemical decomposition of synthetic polymers and strategies to reduce the damaging impact of microfibers It introduces the production of micro and nanomaterials from cellulose as an alternative to relatively toxic and non ecofriendly micro and nanomaterials produced from other sources together with the bio functionalisation of textiles Students following A level courses or equivalent and first year undergraduate students reading textile technology subjects at university will find this book a valuable source of information *Concise Polymeric Materials Encyclopedia* Joseph C. Salamone,1998-08-28 Concise Polymeric Materials Encyclopedia culls the most used widely applicable articles from the Polymeric Materials Encyclopedia more than 1 100 and presents them to you in a condensed well ordered format Featuring contributions from more than 1 800 scientists from all over the world the book discusses a vast array of subjects related to the synthesis properties and applications of polymeric materials development of modern catalysts in preparing new or modified polymers modification of existing polymers by chemical and physical processes biologically oriented polymers This comprehensive easy to use resource on modern polymeric materials serves as an invaluable addition to reference collections in the polymer field

High Performance Synthetic Fibers for Composites National Research Council,Division on Engineering and Physical Sciences,National Materials Advisory Board,Commission on Engineering and Technical Systems,Committee on High Performance Synthetic Fibers for Composites,1992-02-01 High performance synthetic fibers are key components of composite materials a class of materials vital for U S military technology and for the civilian economy This book addresses the major research and development opportunities for present and future structural composite applications and identifies steps that could be taken to accelerate the commercialization of this critical fiber technology in the United States The book stresses the need for redesigning university curricula to reflect the interdisciplinary nature of fiber science and technology It also urges much greater government and industry cooperation in support of academic instruction and research and development in fiber related disciplines
