Statistical Models for Strategic Management Michel Ghertman, Jacques Obadia, Jean-Luc Arregle, 2013-03-14

Statistical Models for Strategic Management offers practical guidance in the use of statistical models for empirical research in strategic management. The contributions in this edited volume come from distinguished researchers in the field of Strategic Management and provide illustration of most statistical models that are relevant for strategy research. The book is divided into four major topical areas: Strategic Analysis and Firm Strategies, The Resource Based View of the Firm, Transaction Costs, Agency Theory and the Boundaries of the Firm, and Corporate Alliances, Acquisitions and Networks.

Encyclopedia of Microcomputers Allen Kent, James G. Williams, 2021-06-30. This volume contains information about the automatic acquisition of biographic knowledge from encyclopedic texts, Web interaction and the navigation problem in hypertext.

Handbook for Teaching Statistics and Research Methods Mark E. Ware, Charles L. Brewer, 2013-11-26

This volume presents a collection of articles selected from Teaching of Psychology sponsored by APA Division 2. It contains the collective experience of teachers who have successfully dealt with students' statistics anxiety, resistance to conducting literature reviews and related problems. For those who teach statistics or research methods courses to undergraduate or graduate students in psychology education and the social sciences, this book provides many innovative strategies for teaching a variety of methodological concepts and procedures in statistics and research methods courses.

Illustrating Statistical Procedures: Finding Meaning in Quantitative Data Ray W. Cooksey, 2020-05-14. This book occupies a unique position in the field of statistical analysis in the behavioural and social sciences in that it targets learners who would benefit from learning more conceptually and less computationally about statistical procedures and the software packages that can be used to implement them.

This book provides a comprehensive overview of this important research skill domain with an emphasis on visual support for learning and better understanding. The primary focus is on fundamental concepts, procedures and interpretations of statistical analyses within a single broad illustrative research context. The book covers a wide range of descriptive, correlational and inferential statistical procedures as well as more advanced procedures not typically covered in introductory and intermediate statistical texts. It is an ideal reference for postgraduate students as well as for researchers seeking to broaden their conceptual exposure to what is possible in statistical analysis.
