SystemC Wolfgang Müller,Wolfgang Rosenstiel,Jürgen Ruf,2003-05-31 This comprehensive survey on the state of the art of SystemC in industry and research is organised into 11 self contained chapters Selected SystemC experts present their approaches in the domains of modelling analysis and synthesis ranging from mixed signal and discrete system to embedded software

Design Methods and Applications for Distributed Embedded Systems Bernd Kleinjohann,Guang R. Gao,Hermann Kopetz,Lisa Kleinjohann,Achim Rettberg,2006-04-11 The IFIP TC 10 Working Conference on Distributed and Parallel Embedded Systems DIPES 2004 brings together experts from industry and academia to discuss recent developments in this important and growing field in the splendid city of Toulouse France The ever decreasing price performance ratio of microcontrollers makes it economically attractive to replace more and more conventional mechanical or electronic control systems within many products by embedded real time computer systems An embedded real time computer system is always part of a well specified larger system which we call an intelligent product Although most intelligent products start out as stand alone units many of them are required to interact with other systems at a later stage At present many industries are in the middle of this transition from stand alone products to networked embedded systems This transition requires reflection and architecting The complexity of the evolving distributed artifact can only be controlled if careful planning and principled design methods replace the hoc engineering of the first version of many standalone embedded products

Languages for Embedded Systems and their Applications Martin Radetzki,2009-05-24 Embedded systems take over complex control and data processing tasks in diverse application elds such as automotive avionics consumer products and telec munications They are the primary driver for improving overall system safety ef ciency and comfort The demand for further improvement in these aspects can only be satis ed by designing embedded systems of increasing complexity which in turn necessitates the development of new system design methodologies based on speci cation design and veri cation languages The objective of the book at hand is to provide researchers and designers with an overview of current research trends results and application experiences in c puter languages for embedded systems The book builds upon the most relevant contributions to the 2008 conference Forum on Design Languages FDL the p mlier international conference specializing in this eld These contributions have been selected based on the results of reviews provided by leading experts from search and industry In many cases the authors have improved their original work by adding breadth depth or explanation

Formal Methods: Applications and Technology Lubos Brim,Boudewijn Haverkort,Martin Leucker,Jaco van de Pol,2007-06-27 This book constitutes the thoroughly refereed joint post proceedings of the two International Workshops on Formal Methods for Industrial Critical Systems FMICS 2006 and on Parallel and Distributed Methods in Verification PDMC 2006 held in Bonn Germany in August 2006 in the course of the 17th International Conference on Concurrency Theory CONCUR 2006

Kaźmierski, Steve Beeby, 2010-11-01 Kinetic energy harvesting converts movement or vibrations into electrical energy enables battery free operation of wireless sensors and autonomous devices and facilitates their placement in locations where replacing a battery is not feasible or attractive This book provides an introduction to operating principles and design methods of modern kinetic energy harvesting systems and explains the implications of harvested power on autonomous electronic systems design It describes power conditioning circuits that maximize available energy and electronic systems design strategies that minimize power consumption and enable operation The principles discussed in the book will be supported by real case studies such as battery less monitoring sensors at water waste processing plants embedded battery less sensors in automotive electronics and sensor networks built with ultra low power wireless nodes suitable for battery less applications
